UNBEATABLE PROGRAMS:

TALKING COMPUTERS △ SCROLLING WINDOWS △ SECRET WRITING

Quite simply, it leaves other word processors lost for words.

WordPerfect 4.1 for the Amiga includes many features not found in other word processors.

Newspaper style columns can be displayed on screen, 110,000 word UK phonetic dictionary, word-count, background printing and automatic reformatting increase efficiency.

Line drawing and rulers, search/replace and 5-function maths are invaluable assets.

By using the Amiga's pulldown menus nearly all WordPerfect's features are available at the click of a mouse. This makes learning easier than ever before and

using it a real pleasure. But if you prefer the traditional function keys there is a colour coded template to make life easy.

What you see on the screen is what will actually print. This makes good, professional layouts simple.

Documents are treated as a whole and not a series of pages. Reformatting and repagination after editing are automatic and very rapid.

However fast you type, you will never be too fast for WordPerfect.

To find out more, write to the address opposite.

And see how WordPerfect delivers today what others are still searching for.

DATA STATEMENTS

FAST Broadside

A simultaneous swoop on software pirates in the Glasgow, Wishaw, and East Kilbride areas north of the border has netted the Federation Against Software Theft its most successful sortie yet. Assisted by the E Division of Glasgow CID and a motley crew of software house representatives, Bob Hay of FAST is now in possession of suspect software with a street value estimated at £100,000.

Of the co-ordinated raids, Bob said, "Piracy in Scotland has been of concern for some time but with some very good information and assistance from Electronic Arts, the Strathclyde police carried through a very thorough investigation. Results so far are most encouraging."

Simon Jeffery, UK Sales Administration Manager for Electronic Arts and EA's representative on the raids added, "We are alerted to the pirates' activity both by end-users and our local dealer/salesman relationship, and worked closely with FAST over a number of months to make this operation a success. Electronic Arts feels that if software houses can work with FAST in taking a firm stand against piracy, it can be countered."

If you buy software and you think that it isn't the real McCoy, you should first of all contact the software house who normally markets. If you don't know the software house then you can contact Bob Hay on 01-430 2408.

Juicy Jargon

At the newsdesk we get inundated with press releases for all manner of machines and services, many of which invite us for a tea and sticky bun session at some plush venue. The latest 'ave-a-lunch features two choice examples that makes trainspotters reach for their tech-specs.

The first, from Peterborough Software and aimed at personnel managers, opens with 'Dear Human Resource Professional' (pass the bucket, I think I'm going to be...). Honestly, if our personnel manager heard anyone labelling her in such a way they'd get an instantaneous pugili-

New labels

Top selling budget software house, Alternative, have created a new lable, Again Again, which will be releasing full price games in time for Christmas. The first title, The Munsters, should be appearing later this month and involves the whacky exploits of Channel 4's cult television family of Frankenstein's, vampires and werewolves.

Psygnosis, originator's of Barbarian, have launched Psyclapse as a new games label. Once more,

illustrator Roger Dean has been called in to design the new logo but future illustrations for the games will draw upon a broad spectrum of leading artists. Although Psyclapse will run alongside Psygnosis, the two labels are to maintain separate identities.

Touchline: Again Again Units 3-6, Baileygate Industrial Estate, Pontefract, West Yorks WF8 2LN.

Psyclapse First Floor, Port of Liverpool Building, Pier Head, Liverpool L3 2BY.

Free Disks

Compumart are suppliers of disk boxes for 3.5 and 5.25 inch disks. Amiga owners, or owners of the new 1581 drive for Commodore's eight bit machines, will be pleased to note that the 3.5 disk box has a special offer at the moment. With each box sold, Compumart will supply two free disks which amounts to almost a 50% reduction in the £11.26 cost of the box (excluding VAT but including first class delivery and same day despatch).

The storage boxes are lockable and made from anti-static, impact resistant plastic. Each 3.5 box can hold up to 70 disks and comes with a set of dividers.

Touchline: Compumart, Jubilee Drive, Loughborough, Leics LE11 0XS. TEL: (0509) 61044.

Two Board Tales

While Domark are busy revamping Trivial Pursuit, Grandslam are working on a new boardgame conversion.

Grandslam's game is Espionage which takes the players into the world of secret agents travelling the globe to unearth four microfilms which form the plans for the ultimate super weapon.

As the search goes on, the spies will occasionally meet and battle to the death and the first one home with all four films is the winner.

Domark appear to have decided to squeeze as much as they can from their Trivial Pursuit licence. In the offing is a new concept for the background behind the question and answer game which is more suited to computer players.

The game is called Genus II — A New Beginning and involves the players in a race to reach the planet of Genus II. Each player has to win a place on their laser powered spacecraft by answering a Trivial Pursuit question correctly. On the journey through space, the craft has to land at six planets or stars and collect a luxury household item from each before finally arriving at Genus II.

Another venture of Domark's is the computer version of the 1973 James Bond movie Live and let Die. Rumour has it that the original Domark authored game was not considered good enough but Elite had a speedboat game on the starting blocks which fitted the bill. The result is a shared game which will feature both companies logos.

Touchline: Domark House, 22 Hartfield Rd, Wimbledon, London SW19 3TA. Tel: 01-947 5622.

Stop Press

Two problems beyond our control have altered the contents of the magazine as displayed on our cover.

We apologise for the non-appearance of the Three Stooges revue destined for this issue but the Post Office strike affected receipt of the text. Normal service will be resumed by the time the December issue hits the street and the Three Stooges will be there.

The second apology relates to the

Giana Sisters review. Although some copies of the game have been circulated, Nintendo have slapped an injunction on Rainbow Arts for infringement of copyright. US Gold, who hold the British distribution rights, have had to withdraw the game from sale until the situation is resolved.

US Gold deeply regret having to make this move and hope that Nintendo and Rainbow Arts can reach a mutual agreement which will allow the game back into circulation.

Plus 4 Fantasy

York Electronic Research are set to launch a new software package for the Plus 4. Using their program it is possible to create a series of printer typefaces which will give documents that extra touch of class.

A release date and price have not yet been fixed but you can be sure that we'll be putting it through its paces in a future review as soon as the YER production line gets going.

Touchline:

York Electronic Research, The Fishergate Centre, 4 Fishergate, York YO1 4AB. Tel: (0904) 610722

Fortran for the C64

Although the Fortran programming language has been around for thirty years, it is still one of today's most widely used languages. In the US, Abacus have developed a stripped down version for the C64 which supports over 45 statements and functions so that users can get the feel of the language and examine the benefits through hands-on experience.

Fortran 64 includes a built-in editor, compiler and linker so that fast standalone programs can be produced, running even when Fortran 64 is not in residence.

At the moment, there are no plans to release the program in the UK but maybe in time a pioneering company such as Financial Systems Software will see fit to import a few copies.

Touchline:

Abacus, 5370 52nd Street SE, Grand Rapids, MI 49508.

Special Reserve

Half price software is on offer as the public relations company, Inter-Mediates, diversifies into the mail-order business.

The venture takes the form of a club called Special Reserve and the £4 per year membership entitles each member to three issues of the Special Reserve Buyer's Guide in addition to

the updates on new releases that are sent with every order.

The club boasts a catalogue in which discounts can be greater than 50% before postage and packing is added.

Touchline:

Inter-Mediates, 2 South Block, The Maltings, Riverside Way, Sawbridge-worth, Herts. Tel: (0279) 726585

Dragon Simulator

We knew they could do it if they tried. Code Masters latest release is called Super Dragon Slayer. 'Wot, no simulator,' we all cry.

Perhaps this departure into pastures new is in response to the expansion of the programming team.

Tim Miller is the latest signing for Code Masters and the gang of four (David and Richard Darling, Mark Baldock and Mike Clark) is now a

quintet. Tim has written Skate Crazy for Gremlin and ATV Simulator for guess who?

The new signing the launch of several 16-bit projects which should be ready for release in the not-to-distant future.

Touchline:

Code Masters, Lower Farm House, Stoneythorpe, Southam, Warks CV33 ODL. Tel: (0926) 814132.

Tim Miller flanked by Richard and David Darling.

COMMUNICATIONS CORNER

CompuNet, the on-line commercial database for C64, Amiga and ST users, has followed Prestel/Micronet and MicroLink and revised its tariff structure.

The price of a Gold subscription (a Gold sub is favoured by those who use the service on a regular basis) is now £19.50 a quarter, an increase of £4.50. However, Gold subscribers will get an additional 1000 page/days which brings the total to 2000.

An additional £10 per quarter entitled a user to upload programs to the system regardless of length. This has now been restricted to 45,000 page/days per quarter.

The unlimited off-peak connect charge is now £10, a rise of 22p. Finally, the standard connect charge has risen from 60p to 80p per hour.

The price increases will hit the regular user who uploads programs onto the system — and at 75 baud! The concession of an additional 1,000 page/days is fine for those who use the chat on-line facility, or have text based areas, but those who upload programs on a regular basis will be hurt the most.

Considering that CompuNet's survival relies on its users' goodwill to supply a regular stream of text-based material and programs, it's somewhat surprising that the company did not come up with a better concession than the extra 1,000 page/days.

Shades of Gold

Shades, the popular multi-user adventure game is now available on Telecom Gold.

Shades first appeared as a value added service (VAS) on Micronet a couple of years ago. Since then, Telemap, which operates Micronet, has made Shades available to all Prestel users, and recently it has become the premier feature on Telemap's 0898 service FunTel.

Shades can be played on Telecom Gold by entering SHADES at the chevron prompt '>'. During peak hours Shades will be free, as the cost is absorbed in the peak-rate charge. During off-peak hours the cost is 4.5p per minute on top of the off-peak charge.

Your Commodore notes that playing Shades on system 72 (MicroLink) is cheaper than playing the game on any other system because MicroLink does not charge for data transfer to or from Telecom Gold, as is the case with other systems.

MicroLink users, who use the GW command which displays a list of databases that are available via gateway, will notice that Shades is not included (even though it is available). When asked about this omission Derek Meakin, MD for Database Publications which operates MicroLink, said: "We haven't decided what to do about Shades yet."

Execudroids take note

Two developments have occurred in the comms world that will be of interest to business users.

First, MicroLink subscribers who read the excellent Newsbytes columns now have the option of reading EXEC after entering the newsbytes area. EXEC stands for executive briefing and unlike the other columns that contain comprehensive reports, EXEC is geared towards the business user and offers concise information as well as a contact.

Secondly, Prestel users will soon be able to read InterBusiness which is aimed towards those who are running

small businesses and the self employed.

According to Telemap's PR manager, David Rosenbaum, InterBusiness will be a totally separate product from Micronet.

Telesoftware Amiga!

Previously, all downloadable telesoftware provided by Micronet has been stored as pages on the Prestel database. This has changed and Micronet is now providing all its telesoftware via a gateway.

This means that instead of storing a program as encoded pages on Prestel, a link is provided to Micronet's own Amiga 2000 on which all the programs are stored.

At the time of writing, technical details of how the system works were not available but it's clear that the decision to store telesoftware on their own system is a wise one. Programs for the Amiga, PC and ST tend to be large, and take up numerous frames. These frames cost Micronet money for rent, storing the programs on their own computer will no doubt save money.

An interesting aspect is that all the software is to be free of charge. This is because it's not possible to implement a frame charge via a gateway. Just what will happen to third-party, chargeable telesoftware (as provided by Your Commodore for example) is not yet clear.

A chatline at last

Commodore users who subscribe to Micronet now have their very own Chatline called CBM RABBIT.

Most machines supported by Micronet have their own chatline on which users can talk (rabbit?) specifically about their own type of computer.

Currently, CBM RABBIT is rather under-used, and Andy Waller who runs the Soley CBM area on Micronet may decide to place the regular letters section within CBM RABBIT.

Wanna bet?

Computers and betting have been used together for years. The major betting houses were amongst the first corporate group to make use of computers for computing odds, displaying the SP on a race such like. Now Telecom Gold users who like to play the gee-gees can subscribe to a new service called Turfnet.

Turfnet is a tipster service which provides its subscribers with the very latest information on a race. Unlike conventional racing sheets, Turfnet is updated every morning and takes into account whether conditions. Detailed information on the days racing is provided together with tips on the best horses.

Aimed at the serious punter (the service costs £20 per month), a free trial offer is available to anyone who sends a request to 74:SDR004.

Prestel users need not feel left out either. For quite some time a number of information providers (IPs) have been supplying punters with tipster services.

For the casual punter daily tips on Viewtel 202 are provided, while B&RD supply a daily tip for 55p. The more serious punter can analyse the data for a specific race on the B&RD database for 38p per race. The services mentioned do not require any extra subscription, however, the serious punter can subscribe to B&RDs more professional service which is also on Prestel.

Now you can afford perfect data storage

(Available in boxes of ten: 5.25" SS/DD at £7.95; 5.25" DS/DD at £9.95; 5.25" DS/HD at £15.95; 3.5" DS at £17.95; all inclusive of VAT)

The all new range of Commodore Diskettes

Don't risk losing your valuable data. The superb quality offered by Commodore Diskettes ensures perfect data storage, time after time at a price you can afford.

Available now from your local computer dealer

Trade enquiries only to SJB Disks Ltd., the officially appointed sole U.K. distributor.

Any minute now the deluge of Christmas offerings will burst onto the scene... but not yet!

Kane II

Games Update

With luck, this month should mark the end of the summer lull caused by software houses mainly concentrating on the games they are preparing for launch in the run up to Christmas. This annual dearth is particularly marked this year with the opening of the Olympic Games in Seoul adding to the mountain of games awaiting autumn release.

Traditionally, this makes early autumn a good time for compilations and budget games, particularly for the re-release of classics.

Budget games

There's a new force in cut-price software as US Gold back a new budget venture called Kixx. All Kixx games cost £2.99, with the initial batch of releases coming from US Gold's

back catalogue which includes Ace of Aces, 10th Frame and this month's duo of Gauntlet and Metrocross.

Gauntlet is the arcade classic and features 512 levels of monsters, magic and treasure as you guide a wizard, warrior, elf or valkyrie into the depths of the dungeon. This was the Christmas number one two years ago and is still one of my favourite games.

Metrocross is a more recent but less

Metrocross

Tau Ceti

well-known, coin-op conversion in which you must complete an obstacle course within a time limit. In your way there are hurdles to trip you, giant barrels to squash you, potholes to plummet into and slowdown tiles which put the brakes on and lose you valuable seconds. On the positive side, you will find springboards to give you a lift and a skateboard to carry you to the finish.

I think *Tau Ceti* was one of the best space exploration and combat games of its time and now it's back as part of Mastertronic's Ricochet range. In the game you control a skimmer vehicle in a desperate mission to power-down the defence systems of *Tau Ceti III* which were turned renegade by a freak meteor storm. This is far from easy as you have to battle with the Hunter attack-craft while collecting reactor rods from the reactor substations so that they can be used to power-down the system controlled by the main reactor.

These substations are spread throughout the cities of *Tau Ceti* which are connected by a network of jump pads and patrolled by still more hunters.

Mastertronic's *Vectorball* seems the most promising of the specially written budget games, an area once again dominated by Mastertronic. It's a two-player, futuristic sports game fought out on a vector-graphic pitch full of hollows, peaks and waves. The aim is to control your spinning player and knock the ball into a human, or computer, opponent's goal area. It's very pretty to look at but incredibly difficult to play.

Kane II is the wild-west sequel in which you must shoot bad guys who are travelling on a train, capture Fort

Karate Ace

Apache to rescue a princess and then ride a bucking bronco before escaping across some treacherous terrain.

Knight Tyme is the second in the series of games featuring Magic Knight. Having survived the ordeal of *Spellbound*, you now find yourself onboard the *USS Pisces* in the 25th Century. If you're to get out of this mess, you'll have to contact the *Tyme Guardians* to get a *Tyme* machine while keeping out of the way of the *Space Pirates* and the *Paradox Police*. The *Windimation* system, animated characters combined with windows contain adventure-style commands, mixes well to create a true arcade adventure.

Super Cup Football is from the Hewson/Mastertronic *Rack-it* label and is a top-down view, soccer

simulation that is similar in many ways to the *World Cup* table-top arcade machine.

Full price games

Karate Ace is a compilation of martial arts games that pack a few punches as well as some chops and kicks. Compiled by Gremlin Graphics, the pack includes *Way of the Exploding Fist* (the Grand Master and daddy of them all), *The Way of the Tiger*, *Samurai Trilogy*, *Bruce Lee* (more like a platform game), *Kung-Fu Master*, *Avenger* (Gauntlet - kung-fu style) and the judo game, *Uchi Mata*. If you don't feel like you could take on all-comers after playing that lot, you never will!

Summertime Specials is the latest US Gold compilation which features hits from the past. This six-pack

Knight Time

Super Cup Football

Street Fighter

includes World Class Leaderboard, Solomon's Key, Bravestarr, Captain America, Trantor and the coin-op conversion, Rygar.

Street Fighter is a game for people who want to fight around the world and actually features two version of the game in one box. They couldn't decide which was the better the public when they received the US and UK versions and decided to let the public decide. I'm afraid the patriots are in for a disappointment as the US version is streets better.

Street Sports Soccer

Street Sports Soccer is Epyx's (US Gold) version of how football is actually played, so you can forget Wembley and head instead for the park or the alley for a three-a-side game with the local kids. The goals are made out of piles of boxes or cans and you can play for a set amount of time or up to a number of goals. The most important part of the game is to win the toss so you get first pick for sides.

The original Pink Panther is back in a Gremlin game. He's broke, so he gets a job at a mansion house but really goes to work at night by helping himself to the family jewels. It's not going to be easy because the owner sleep-walks and you have to steer him

4x4 Racing

away from objects that will wake him up and you'll be caught red-handed.

4x4 Off Road Racing takes car racing from the safety of the track to a series of terrains that will test you, your car and especially its tyres. The races are a mixture of driving skill and mechanical expertise in which you have to patch up your car as you go along, so you have to ensure that you have the parts you'll need before you set off.

The Empire Strikes Back is Domark's second instalment in the Star Wars trilogy in which the player stars as Luke Skywalker. This time he's flying a skyspeeder against the Empire's probots, walkers and, finally, its tie-fighters. If you enjoyed Star Wars then you'll like this as it's more of the same and, for the real Star Wars

addicts, Domark is adding the final touches to the Return of the Jedi which ought to be out soon.

US Gold caused a great controversy with its chauvinistic advertising campaign for Psycho Pigs UXB, so it's nice to see the game behind the posters at last. You play a Psycho Pig surrounded by a screenful of equally psycho pigs and must wipe them out by picking up and hurling bombs at them. This sets off a timer which explodes the bomb when it reaches zero. That's all there is to it. It's one of those ridiculously addictive games that you play over and over without quite knowing why and it would make a great budget game — unfortunately, it isn't.

Tony Hetherington

The Empire Strikes Back

*Learn to conceal messages and how to protect your
Basic programs with a top secret password*

Secret Writing

The Spartans did it, the Romans also, World War II armies did it and the Russians and Americans are still doing it. Throughout history people have exchanged secret messages in the hope that others could not pry into their affairs. The only way they could achieve this was by use of a secret code or cipher to disguise the actual text.

Even inside the workings of a computer there are code languages and text, such as machine code, Binary Coded Decimal or even the ASCII code. Most programmers are already familiar with these and there is nothing secret about them.

The study of secret writing is given the name 'cryptology' and the process by which an ordinary message is concealed is called 'encryption'. Depending on the type of encryption used, this process will transform the message into a secret code or cipher. The difference between the two is that a code uses whole words or parts of the text during encryption, whereas a cipher operates on each individual letter.

Decryption is the name given to the process which transforms the message back to its original state. As codes are a bit more complicated than ciphers, this article and its accompanying programs will be based only on secret ciphers. The processes used with a cipher are given different names: to conceal a message the process is called encipherment, and the revealing of the message is called decipherment.

To get the ball rolling, let's take a look at a simple cipher and how it works. Julius Caesar used a very simple cipher whereby he would move the alphabet

a number of places forward, starting from the letter A. For example, if we show the normal alphabet and one underneath which had been moved four places forward, you will see the difference (Diagram 1). In this context, when concealing a message, the letter A would be replaced by an E, letter B would be replaced by F and so on through the alphabet. If we were to encipher the words YOUR COMMODORE, the resulting text would become CSYV GSQQSHSVI which looks very different from its original lettering. You can, of course, move the alphabet as many places as you like but with only 26 letters in the alphabet it would be wise to stick with a number between 1 and 25. The golden rule is to use the same number in both enciphering and deciphering the text.

Because there can only be 25 possible configurations of this cipher, it is not very useful for protecting programs but it can easily be used to send secret messages to your friends. If you wish to experiment more with the Caesar Cipher then you can type in the listing at the back of the magazine. This program will do all the hard work of enciphering and deciphering for you, when you run it, you will be prompted for the mode required. First press key E to encipher and then enter the keynumber, which is the number of places you want the alphabet to be moved forward from the letter A. Next enter your message and a display of the normal and ciphered alphabets will appear with the keynumber and the message in normal (or deciphered) and enciphered states.

To decipher a message, press key

Diagram 1

Normal ABCDEFGHIJKLMNOPQRSTUVWXYZ
Cipher EFGHIJKLMNOPQRSTUVWXYZABCD
(-4 places)

D on the main menu, enter any keynumber, then the enciphered message. From this point it is possible to go through each of the 25 cipher configurations until the correct deciphered message appears. If you follow the on-screen prompts, everything should run smoothly.

Keywords and grids

The Caesar Cipher is very easy to crack, one of the reasons for this is that the text is directly enciphered without further scrambling of the letters. The next example aims to combat this by using a keyword in the encipherment/decipherment process. This cipher is called a Columnar Transposition and also introduces the use of a grid in which we place each letter of the message.

If we choose a keyword such as CODES and a simple message: THIS IS A SECRET MESSAGE OKAY. This contains 24 letters, so the first step of encipherment would look like Diagram 2(a). As you can see, the message is placed in the grid starting at the top left corner. The actual grid size is constructed by placing each letter of the message into the columns under the Keyword until all the letters have been used. In this example an empty space is left which has to be filled. I have chosen the letter X for filling and this can be seen in the bottom right corner of the grid.

The next step is to put the letters of the keyword into alphabetical order. During this process, as each letter in the keyword is moved, the whole of the column below it in the grid is also moved, after which the text in the grid ends up looking like Diagram 2(b).

In the final step, the letters are read back from the grid. Starting at the top

left corner, we read down each column so that our final enciphered message ends up as: TSRSO ISTAA SEMGY HAESK ICEEX.

To decipher a message we basically reverse each step of encipherment.

If you managed to follow all of that, you will be pleased to know that the listing entitled 'Columnar Cipher' will do all the hard work for you. This program works in much the same way

as the Caesar Cipher listing. Press either key E or key D to encipher or decipher respectively, then enter a keyword (at least two letters) and, finally, type in the message to be enciphered. Please note that the keyword entered must be the same in both enciphering and deciphering, and that all letters displayed, including any additional Xs, must be entered when deciphering.

Diagram 3(c)

Many more ciphers

The final cipher is based around an old fractionating method which is much more sophisticated and tougher to crack than the previous examples. First of all, take any keyword (preferably large), and mix this with the alphabet in a 5x5 grid which has its rows and columns numbered from 1 to 5. If we use a keyword such as COMPUTER, the resulting mix with the alphabet would look like Diagram 3(a). As you can see, the keyword is placed into the grid starting at the top left corner, or the co-ordinates 1,1 (row 1, column 1). You may also notice that there is no letter Z, this is because there are 26 letters in the alphabet and only 25 possible places in the grid. The standard way around this would be to place two letters in the same grid position but it's easier to leave out the Z and this should not be detrimental.

In the next step we encipher a message by locating each letter's co-ordinates in the grid and writing them down. Letter J, for instance, has the coordinates of 4,1 and if we apply this to a piece of text such as: I LOVE YOU SUSAN then the coordinates of Diagram 3(b) would be produced.

The next step is to mix up the row and column digits. This is achieved by reading along the row co-ordinates and rewriting the digits by alternating between row and column. The same is then done with the column co-ordinates. If we do this to the first four row digits of Diagram 3(b) then the resulting co-ordinates would become (3,4) (1,5) (2,5) until (2,4). The series would continue with (5,3) (2,2) (2,5) through to (4,4). Fully transposed, we end up with the coordinates as in Diagram 3(c).

The final stage of encipherment involves the conversion of the co-

ordinates of Diagram 3(c) back into letters. This is done by locating the letter corresponding to each new co-ordinate on the initial grid in Diagram 3(a). After doing this, our enciphered text becomes HUBCSVQFEVSSN.

For those of you that wish to experiment with this cipher, the listing entitled 'Fraction cipher' has been included.

On the main menu press either key E or key D to encipher or decipher. As in the last cipher you will be required to enter a keyword and then the message. Use only letters A to Y and no spaces. The program will display the grid with the mixed keyword and your message.

Although this article only considers three methods of coding, there are many other ciphers going under titles such as substitution, block transposition, polyalphabetic and fractionating ciphers and to explain all these would require a whole book. If this article has enticed you into the world of secret writing, then I suggest a trip to your local library, where you should be able to find further references.

Protecting a program

The basic idea behind any cipher is, of course, to stop anybody else from reading what you have written, but they can also be used for other applications. 'Password Protector' will save out a Basic program whereby your own password must be entered before the program will run.

Password Protector is written in machine code and sits in RAM from \$C000 to \$C79E.

Before using the program, there are a few rules to obey. The Basic program you want to protect must be in memory and it must lie at the normal Basic start position of 2049 (\$0801). Additionally, you must have at least

600 bytes of memory free to make room for the machine code deciphering section which is placed before your protected Basic program.

You can start Password Protector at any time with SYS 49152 where you will be presented with three choices. If you have a Basic program in memory that you wish to protect, press key 1 and you will then be prompted for the destination device for the protected version. Press either key D for disk or key T for tape. Next, enter a filename of up to a maximum of 14 characters. The last two characters of the filename will always be 'X' to help distinguish the protected file from others. You will then be required to enter a password of up to 15 characters but only letters A to Y can be used. After this, your protected Basic program will be saved out and you will be returned to the main menu.

Option 2 gives disk users a chance to read the disk directory, this can be used without corrupting any program in memory. The final option will return you to Basic.

Please note that you must remember to use the exact password when you reload the protected version or else the computer will reset, it might help if you use a note book to keep a record of any passwords used with their corresponding files and keep it somewhere safe.

Example Messages

When you have typed in the Basic listings for each of the ciphers, you might like to try the following enciphered messages. Before you use these examples though, make sure that you press key D to decipher, this goes for all of the examples. On the Caesar Cipher try this example: keynumber 10, message:

RSGOVMYWODYDROGYBVNYP
 COMBODMYNOC.

On the Columnar Cipher try this: keyword COMMODORE, message: IMRXKXOSVILUECOXCX

On the Fraction Cipher try this: keyword GOOD INFORMATION, message: JWOFMGQXCFCGNRE MRESGWTR.

I hope that this article has uncovered some of the possibilities for using secret ciphers on your Commodore 64 and that you will experiment further. If so, I suggest you go out and get cracking!

Contributions

*So you own a Commodore? So you've
written some programs? So why haven't you
sent them to us?*

Your Commodore is always on the look out for new programs, hints and tips, articles and even regular series. In fact if you have something that you think could be of use to other Commodore owners we want to hear about it.

So if you have got something which you think we may be interested in. How do you go about submitting it to us?

Below you will find a list of guidelines that will help us to deal with any item that you send in to us. We don't expect everybody to be the next William Shakespeare but if you do follow these simple rules then it will make our job a lot easier.

1) If possible all material sent to the magazine should be typed or printed out on a computer printer.

2) All text should be double spaced i.e. there should be a blank line between each line of text. You should also leave a margin of about 10 characters around the text.

3) On the very first page you should put the following:

Name of the article
Machine that it is for
Any extras required - disk, printer etc.
Your name
Your address
Your telephone number

4) The top of every page should have the following information on it:
Abbreviation of the article title
Your name
The page number

For example, suppose you had submitted an article on C64 interrupts. You should put something like the following at the head of the page:

Interrupts/J.Smith/1

5) Please make sure that you do not make any additional marks on your text especially underlining.

6) Try and write in clear concise English, it does not have to be a work of literature but it must be comprehensible.

7) On the bottom of each page you should put the word MORE if there are more pages to the article or ENDS if it is the last page.

8) If possible, enclose a listing of all programs.

9) Under no circumstances use a staple to hold the pages together. Use a paperclip instead.

10) Programs should be included on either disk or tape. Make sure that you SAVE two copies of every program so that we have a better chance of loading them if problems occur.

11) Programs under 10 lines can be included in the text. If your program is longer than this you must enclose a disk or cassette.

12) If your article needs any artwork then supply clear examples of what is needed. We don't expect you to be an artist but we do need to see what is required.

13) Photographs, if necessary, must be either black and white prints or colour slides. We can take shots ourselves so don't worry about this too much.

14) Submissions of any length are welcome. If you have a five line routine that you think may be of use to someone else we welcome it just as much as a full blown six part series.

15) Payment varies quite a lot and depends on quite a number of factors, such as complexity of program, presentation of program, number of magazine pages it takes up etc. Payment is generally between £10.00 and £800.00.

16) All payments are made in the month that the magazine containing your article has appeared in print.

17) If we do find your submission suitable for inclusion in the magazine we will write to you giving the terms of publication, the rate of payment and an agreement form. Prompt return of this form will allow us to use your program as soon as possible.

18) If you want the program returning to you, should we find it unsuitable for publication, then you should enclose a stamped self addressed envelope.

19) The last and most important point to make is 'get writing', we are waiting for your articles.

The day Roger Jackson sent his first mailshot.

I was impressed by the fact that Star have now produced a great looking little budget printer with a 24 pin head.

I was impressed by its excellent quality – the 8 resident fonts available and its high density letter quality helped me produce a really professional mailshot.

I was impressed by the extremely swift draft elite speed of 170cps and LQ elite at 57cps and the standard 7k buffer.

I was impressed by the special push-tractor feature that allows the LC24-10 the lowest possible tear off and its ability to 'park' continuous paper and load single sheets automatically – so there's no need to remove the continuous.

I was impressed by the touch-button front control panel that makes using the printer an absolute dream.

But most of all, I was particularly impressed with myself.

Because my Star LC24-10 was so inexpensive and no other printer comes close for sheer quality and value-for-money.

Emergency Ward 64!

What can you do with a dead disk drive, deceased datasette or a clapped out Commodore?

by Kerry Fowler

Do you believe that your Commodore will go on forever without breaking down? What will you do when it falters? One recourse is to send it away for costly repairs but many of the faults can be repaired at home if you have suitable software.

The latest, and most comprehensive, range of home care kits form the Trilogic Doctor series. Other companies produce quite respectable kits but Trilogic's trio have taken the best ideas, refined them, added a few new twists and produced the packages at respectable prices.

Datasette Doctor

Ever since the plethora of fast loading tape systems arrived on the scene, they have proved to be both a boon and a bane. The benefit is the higher loading speeds, which in many cases equal the 1541 disk drive: the disadvantage is that head alignment becomes more crucial.

The tape head is the part of the datasette which reads magnetic impulses on a tape and converts them into electrical impulses which the computer reads as the zeros and ones of a binary coded program. These magnetic fields on the tape were originally created when the program was recorded onto the cassette.

The head consists of an almost complete ring of metal whose small gap is filled with an insulating material. The metal forming the ring is a magnetically inert alloy which can exhibit magnetic properties under certain conditions. These conditions are created by a current passing through a coil of wire which is wrapped around the arms of the ring.

When the current passes one way through the coil the north and south poles of the 'instant' magnet are found on each side of the insulation. When the current flows in the opposite direction these poles are reversed and when no current flows the ring is magnetically inert.

When a program is recorded onto the tape, the zeros and ones of the binary code is converted by the computer into a series of electrical impulses which are passed through the coils of the recording head. As this is happening the magnetic field across the head 'gap' is constantly being directly affected by the electronic signal.

A cassette tape is coated with magnetised particles which act like small bar magnets. As the tape passes across the recording head, these particles are energised by the head gap's changing field. The tape therefore becomes a continuous record of the changing magnetic fields which the original electronic signal produced.

In playback (load) mode, the tape passes across the head gap. The magnetic field caused by the tape as it passes across the gap causes a small electrical current to be induced in the coil which exactly matches the original signal. When this is amplified and fed back to the computer the signal is reconverted into the original binary zeros and ones, completely recreating the program in the computer's RAM memory.

The gap is a vertical slit which must lie at precisely 90 degrees to the direction of the tape travel. If the gap is only slightly out of alignment, the magnetic fields will not be exactly the same as those created by the recording head unless the recorder was similarly

misaligned (this is why programs recorded by yourself may load easily when commercial tapes won't load at all). The head alignment is also referred to as the azimuth alignment.

Contrary to what may be believed, turbo loading tapes do not make the tape run faster. What happens instead is that the ROM program which normally converts the zeros and ones into electrical impulses is replaced by a RAM program which shortens the signal for a one or a zero and thereby compresses the recorded data onto a shorter length of tape.

Take the rather exaggerated examples of a signal, which lasts for one second, being recorded on a tape which moves at one inch per second. This means that the signal would occupy a one inch length of tape. The head gap, for this example, is a tenth of an inch so the azimuth alignment of the tape could be substantial adjusted without affecting the read signal.

Imagine that a turbo compresses this signal into an impulse lasting one tenth of a second, the head would have to be precisely aligned or the signals preceding and following the recorded 'bit' would significantly affect the

magnetic field across the head gap.

With an actual recording, the times and measurements are much smaller and the head alignment becomes far more crucial. This is why turbos can cause such serious loading problems.

A secondary effect of the constant changes of field is that the heads can gradually collect a residual magnetic force which turns it into a very weak permanent magnet. Although it is unlikely that this residual magnetism will substantially affect a recording, constant passing and repassing of a tape across a magnetised head will weaken a recording by partially erasing the signal and by confusing the induced impulses from the tape.

A third effect of the record/playback process is the collection of particles which are stripped off the tape as it passes over the head. Even though the head is smoothed to a highly polished finish, the abraasive effect of the tape-coating and the general deposits of grease from the air can give a grounding to anchor small particles onto the head. As more and more oxide coating is deposited, the head itself becomes more abraasive and strips off more and more of the tape coating. This deposit confuses the magnetic fields in the head gap, damages the recorded signal and spoils the tape to head contact.

Trilogic's Datasette Doctor pack is designed to eliminate all three causes of loading problems. The pack contains two cassettes, a screwdriver, head cleaning fluid and an adjustment scale and pointer. The two cassettes serve very different purposes; one is a recorded alignment program, the other is a head cleaner/demagnetiser.

The cleaner/demagnetiser should be used first to ensure that there are no extenuating circumstances which might make head alignment difficult to achieve. After cleaning, the first program can be loaded from the alignment cassette. On a very badly aligned datasette, a certain amount of fiddling may be necessary to get the program loaded.

The head alignment screw access hole is located just beneath the cassette 'door', above the centre of the rewind key. The screwdriver from the kit is placed through the centre of the adjustment pointer arrow and then inserted into the screw head through the access hole. The alignment scale is then positioned so that the arrow is pointing to the central bar on the alignment arc and securely fixed with

blutak or sticky tape.

For a badly loading cassette recorder, a suitable position can be found by turning the screwdriver to the left or right, by degrees, within the bounds of the scale's arc. This could take some time as each position is set and a new load attempted.

Once the alignment program is successfully loaded, the instruction manual covers the alignment procedure adequately and the process is very simple to understand. Correct alignment is clearly indicated by the on-screen display.

Once the slow load alignment is set, the alignment can then be fine-tuned for turbo loaders by using the fastload alignment program which should load from the tape without any problems.

This is normally where azimuth alignment packages call it a day, but not so with the Trilogic system. The final program on the tape allows the recording abilities of the cassette to be tested. This test, which may be repeated for three different loading speeds, will show up faulty electronics or worn tape mechanisms, poor tape quality, or mains and TV interference. As the instructions point out, the worn mechanism or faulty electronics cannot be corrected easily, bad tapes should be discarded and interference can usually be avoided by moving the Datasette away from the source of interference.

Drive Doctor

Disk drives are notorious for misal-

ignment problems and the cost of repair can be daunting. Home therapy for a maladjusted drive takes a great deal of courage and care but it's not outside the reach of the majority of disk users with Drive Doctor.

The Doctor's main advantage over the opposition is that the test program is stored on cassette and can therefore be loaded even when the disk drive is totally disabled by alignment problems (you did remember to get Datasette Doctor, didn't you?). Included in the kit is a perfectly aligned disk which is supplied purely as an aid to correcting wayward drive heads and contains no alignment program material whatsoever.

The kit can perform five tests on the drive but the instructions do not stress heavily enough the danger of having the internal mains supply unit exposed while the major tests are being carried out.

Starting with disk speed, the program allows you to make one of the simplest, yet crucial, adjustments that can cure loading faults. The speed adjuster is not easily accessed because it is located on the underside of the internal chassis. This means that the drive case has to be opened and the whole chassis removed.

The instructions are quite clear on how to achieve this and the variable resistor can be pinpointed in minutes (depending on how tightly the chassis is screwed in!).

The trick is to set the adjustment so that the screen displays the number zero constantly. If the number varies

widely it's bad news and a visit to the repair shop may be necessary.

Head jamming is usually caused by a lack of lubrication on the head transport system, unless you've been particularly heavy handed on previous excursions into the drive's innards. The Trilogic test causes the head to travel back and forth along its track, if it sticks - lubricate.

The head needs to know where to find the tracks on every disk so a reference point is given by the back stop. This is the root cause of the horrendous bashing noise that emanates from the drive when the NEW command is used to initialise a disk.

As soon as NEW is executed, the head mechanism pulls back to the outside edge of the disk where the back stop is located. After a few thumps, the drive knows that the motor will normally carry the head to the correct track positions, but what if the back stop is worn or has moved?

This is where the Drive Doctor comes into play. The stop test pulls the head back to the stop, attempts to read a track which should display asterisks across the screen. If this doesn't occur, the head can be positioned for an adjustment which can try the patience of a saint!

The yuppie solution to a noisy back stop is to fit a 'soft' quiet stop which replaces the hard stop with a springy wire somewhat similar to the multi functional bent paperclip. The problem with this fix is that the head bounces off the wire and can have problems finding the correct track position. Even if this doesn't affect the drive's performance, you can guarantee that the wire will soon bend away from its true position.

After the stop is positioned a secondary test can be applied. The hysteresis test places the head on a particular track. The head is then pulled back to the stop and allowed to return to the original track. If this is successful, the drive stop is okay and you can be fairly sure that the head is not jamming.

The final test is the biggie - head alignment. This is tricky and can completely foul up a healthy drive, so take a tip from me and try all of the other tests first. Resist the temptation to try this test just for the hell of it or you may regret ever buying the Drive Doctor. This is for drives with a terminal illness, not for drives that are a bit off colour. By all means run

the test program but, if the report looks reasonable don't try to get a perfect readout. Only one in a million drives can reach perfection - and it isn't yours!

As alignment tests go, this is sheer bliss to use. The screen display is easily understood by the non-technically minded but the adjustment isn't easy. It involves slackening off the heavily lacquered screws which hold the drive motor in position and then twisting the motor housing to achieve good results on both inner and outer tracks. The adjustment can often upset the stop position so a lot of test and test

again methodology is involved. Only for amateurs with guts, so... do you feel lucky?

64 Doctor

This purports to be a 'professional diagnostic cartridge for your 64' but some of the facilities leave me with a few questions. The program is contained on a cartridge ROM and the kit also includes various specially wired plugs so that the output ports can be tested.

The suite of tests start off with a test which displays a C64 keyboard on

the screen. Press a key and the screen registers success by reversing out the corresponding screen display key. If any of the keys fail to respond the absolutely excellent manual will point you in the right direction for fault finding.

Next, the joystick ports can be tested in a similar way and devices such as paddles or analogue joysticks can also be used to test the A/D converters.

The final screen displays the I/O ports and associated chips. Any faults detected are indicated on the screen. This test also checks the banking capabilities of the VIC chip.

Although this package is better than nothing, it doesn't do a lot for its keep. The other two Doctor packs give exhaustive tests, this one merely checks the in and outs. A better name for it would be the C64 I/O Doctor.

Although I am unimpressed with the cartridge, I am very impressed with the manual which, though brief, does give some good pointers to fault finding on the C64 generally. Already I have managed to revive a dead 64 which apparently had an ailing VIC chip but, thanks to the manual, I found that the 'fault' was a secondary effect caused by the demise of another component.

This is the most expensive package of the Trilogic trilogy and really only for the technician who can desolder chips and replace them without overheating the contacts. £18.99 is rather a lot to pay to find out that your 64 is not working which I'm afraid is all that many people will be able to determine with this package.

Triumphant Trilogic

Congratulations to Trilogic for biding their time and watching the opposition falling into the pitfalls that await the producers of diagnostic and repair programs. What they have ended up with is a set of programs which will certainly appeal to a wide range of people. Each pack is well thought through and leaves it up to the individual to judge if they have the knowledge or ability to employ it to the full.

I.C.P.U.G

the Independent
Commodore Products Users Group
is the largest and most friendly
computer club in the country

Back issues for 1987 available to non-members as well as members, at £1.50 each, postage paid.

- Many local groups with regular meetings
- News magazine included in membership - 100+ plus pages of reviews, news and information every two months.
- We support all Commodore Machines old and new; PET, VIC20, 64,16, +4, PC, 128 and all AMIGAS.
- Free Software Library of public domain programs for all the above machines available to members on supply of blank disk or tape and payment of p&p. New members, do not send for this until membership number is received.
- Help and Advice
- Discount scheme
- Subscription only £10 per year (UK) plus £1 joining fee

If you are seriously interested in using or programming any Commodore computer, then joining ICPUG is a must! For full details, send a stamped, addressed envelope to:

ICPUG Membership Secretary, Jack C. Cohen,
30, Brancaster Road, Newbury Park,
Ilford, Essex, IG2 7EP

TELETEXT

A world of information
at your fingertips

Teletext on your 64 or 128 brings you the very latest information free! And unlike a Teletext TV you can print pages like today's TV or save a recipe to disc or cassette. Ceefax and Oracle provide hundreds of pages of news, sports results or share prices, weather and road reports, cars for sale, even bargain holidays plus much much more.

The Microtext Teletext Adaptor fits neatly on the user port, just connect it to the Tuner and plug in an aerial or the Adaptor alone may be connected to the VIDEO OUT socket of a video recorder.

The Microtext Adaptor is only £79.85, Adaptor and Tuner just £124.95 including VAT and p/p.

AMIGA

Amazing full feature Amiga version speaks etc. etc. and also provides colour TV on your monitor. Available now £124.80 + VAT.

MICROTEXT

RS232 INTERFACE 64, 128 or Plus/4* ...£34.99

Measuring only 12x69x57mm, the smallest and neatest unit available. Conforms to Commodore 1011A user-port standard. Compatible with BASIC, Easyscript, Superscript, Superbase, Mini Office, Script Plus etc. Connect to RS232 printers, modems and other devices. Supplied with 1 metre of cable (add 75p extra metre*) terminated with a male (female*) 25-way D-connector, or a custom cable made to your requirements. Our after sales service for unusual printers guarantees to get you up and running. Supplied with a terminal emulator program, file transfer and other utilities on tape/disk*

IBM PC File Transfer Utility£9.99

Captures text or binary files via the COM1 RS232 port. Supplied on a 360k IBM format 5 1/4" disk. Simple instructions provided by on-line help.

VIEWDATA TERMINAL 64 or Plus/4£14.99

Access Prestel, Micronet, CityService etc. Works with any user-port RS232 interface and 1200/75 modem.

CENTRONICS CABLE 64, 128£18.99

Compatible with Easyscript, Superscript etc. Driver for BASIC on disk or tape*.

6502 ASSEMBLER 64 or Plus/4* tape/disk £12.99

A sophisticated two-pass symbolic assembler and text editor which supports tape and disk filing. The assembler, editor, source and object code may all be resident in memory simultaneously, facilitating rapid and interactive code development. Very fast edit/Assembler/test cycles.

Z80 EMULATOR/ASSEMBLER 64 disk £12.99

A unique integrated Z80 development package. The emulator compiles Z80 source code into optimised 6502 which runs on the 64 at about one sixth the speed of a 2MHz Z80. The cross-assembler generates hex or binary Z80 object files. The disk contains a powerful editor and example programs.

Please specify options. Send cheque/PO. or order by access.
Prices include VAT and P&P. Overseas orders add £2.50.
Allow up to 1 week for delivery.

Painless Windows

Program your own pull-down menus and let this routine tend your WINDOW boxes

This collection of utilities provides the programmer with tools to extend the application of Commodore's own WINDOW Basic command. These enable up to 16 restorable windows to be defined with clearly marked edges, without any merging of text across window bound-

aries while retaining the facility for the screen to be restored to the state prior to the window being displayed.

The utilities are simply called via the 'SYS' command within Basic or a 'JSR' within a machine code program. The source code occupies the position normally used by the RS232

buffers and uses the four available zero page addresses between \$FA and \$FE for indirect indexed addressing. The zero page addresses of \$FF and \$A7 are also used, \$FF for bank selection in the store and restore routines and \$A7 as a counter for the last window to be stored.

Programmer's checklist

1. Check window size before calling the border routine.
2. Initialise \$A7 to zero as part of program initialisation routines.
3. Retain startup text screen location.
4. Ensure no channels are opened to device '2' the RS232 otherwise the routines will be destroyed.
5. Do not attempt to restore a screen until one has actually been saved in memory as this may cause the program to crash when an attempt is made to restore the window parameters.

Here's a quick guide to the main inclusions required for a Basic program:

```

10 POKE 167,0:                REM PART OF INITIALISATION
20 ----- rest of program -----
1000 SYS3075:                  REM SAVE SCREEN TO MEMORY
1010 WINDOW10,10,25,20,1:REM DEFINE WINDOW
1020 SYS3072:                  REM DRAW WINDOW BORDER
1030 ----- rest of program -----
2000 SYS3078:                  REM RESTORE SCREEN
  
```

The store and restore routines include read and write routines for the current window border parameters held in zero page locations from \$E4 to \$EC. The values are copied to 9 of the 24 bytes of screen RAM that are beyond the 1000 bytes of displayed RAM. These locations are not normally used but provide useful storage for the window border values, especially as the store and restore routines 'save' blocks of 256 bytes.

The store routine first checks location \$7 to ensure that the maximum number of 'saved' screens is not exceeded. If this value would be exceeded then the routine returns without any further action. If the number has not yet been reached then the routine increments the count, copies the window parameters and 'saves' the screen plus 24 bytes (1024 bytes in all) to the RAM normally used

by the 80-column screen.

The restore routine checks the value contained in location \$A7 to ensure that the value does not fall below the value of zero. This ensures that the screen (and window parameters) are not restored from a source outside the 16K RAM of the 80-column screen. If the check fails, the routine gives control back to the program, otherwise the 1024 bytes are restored to the screen RAM and the count decremented. After this has been achieved the window parameters are restored to the correct locations within the zero page and the window redefined with a call to the ROM routine at \$CA32 and the line pointers reset with a call to \$C15C. Finally, control is given back to the calling program with RTS.

The last routine held within the block of code is also the longest and

responsible for plotting a border around the outside of the currently defined window. The routine does not check what size window is defined, leaving this to the programmer. It is therefore very important for the programmer to be aware of the size of the current window defined because, when this window consists of the whole screen, the routine to draw the border will over-write the first bytes of the Basic program, unless the start of Basic has been moved.

The window border routine makes use of the table within ROM that contains the low and high bytes of the screen line start positions. A relocated screen will require the setting up of a new table within the routine because the ROM is not updated by the system after screen relocation. The line start tables are located at \$C033 and \$C04C.

Many computers make a sound every time that you press a key on the keyboard. This routine allows you to have this facility while programming in Basic. This is great if you type in listings and spend more time looking at the magazine than the keyboard.

The routine works by re-directing the IRQ interrupt at \$0314 to a new routine in free RAM, starting at 679 (\$02A7). After poking the data into memory just enter:

SYS 679

to hear a beep on every key press.

If you don't like the sound that is set up by the program then you can change it with the following pokes:

POKE 730, WAVEFORM
POKE 705, VOLUME
POKE 720, NOTE (high byte)
POKE 725, NOTE (low byte)

To turn the routine off enter:

SYS 750

Neil Higgins

Salamander

Beyond infinity lies the evil galaxy dominated by the forces of the despotic Salamander.

A hero is required who can persuade his compatriots to join him on a journey into Hell and beyond. Surprise, surprise you're that hero.

Your ultimate objective is to destroy a giant brain that controls the Salamander's forces but before that you will have to pilot your tiny craft through massive mazes that are packed with organic monsters.

In this game, the sequel to Konami's Nemesis, you have only three ships with which to complete one of the toughest missions that you will ever have to face, in one of the best coin-up conversions you will ever play.

To succeed you navigate for consecutive levels, each offering a different challenge and range of foes and obstacles including Nuclear Spiders, raging infernos, caverns of despair and a powerful enemy at the end of each level that must be defeated to allow entry to the next level.

Although you begin the game with a single-shot laser as your only weapon, you can dramatically increase your firepower by collecting bonus pods and weapons which appear each time you destroy an entire wave of aliens or one of the special aliens that only seem to appear in the most convenient places. By collecting these pods you can increase the frequency of the shots you can fire, speed up the ship to make it more manoeuvrable, and launch missiles that fire and run along the cavern's roof and floor picking off anything lurking there, or add up to three multiple units to your ship.

Multiples are incredibly useful devices that follow you about as if they were attached to your ship by a rope. They mimic your moves as best they can and fire when you do. A ship with three multiples, missiles and rapid firing lasers should be able to stop

most things but he warned: this game lays traps for the unwary and over confident.

Your main foes in the first level are claws that grow out of the walls to grab you and occasionally hurl a bolt at you just for good measure. Once they've done this to you a few times you'll be ready for these, having learnt to fire at the segment of the body that's a different colour. That's the secret of Salamander. If you see a colour that doesn't match the rest of the monster, aim for it because that's the monster's weak point.

Unfortunately, just as you get the hang of this, the walls suddenly grow out to crush you, giant spikes appear in your way and missiles whistle in your direction. One of the most difficult traps to navigate is a section of wall that must be blasted away, only to find that it regenerates. You have to move fast to get through it while remembering to avoid the blasts from exploding, bulbous monsters.

At the end of each level there's always the giant mega-monster that must be slain if you are to reach the next level until your final confrontation with the Salamander's brain.

Every hit from a missile will cost you one of your lives unless you manage to wipe out one of the waves at the start of a level. This provides a shield that surrounds and flashes around your ship, giving you limited protection. Navigating the wall at the end of the first level will usually destroy the shield, leaving you vulnerable for the end-of-level conflict.

A superb shoot-em-up and one of the best coin-up conversions to date.

TOTAL BACKUP POWER! Now ACTION REPLAY

NOW EVEN MORE POWERFUL, MORE FRIENDLY AND WILL BA

ONLY
£29.99
POST FREE

Action Replay works by taking a 'SNAPSHOT' of the program in memory so it doesn't matter how the program was loaded – from tape or disk – at normal or turbo speed.

● **WARP 25. THE WORLD'S FASTEST SERIAL DISK TURBO – NOW EVEN FASTER! LOADS 200 BLOCKS IN 6 SECONDS! 240 BLOCKS IN 7 SECONDS!** – that's even faster than some parallel systems. Built into the cartridge – no extra hardware or software required. Includes supercast, warpsave, scratch, filecopy/convert. Integrated with normal disk turbo for supercompatibility – auto detects warp or normal format so no special load commands are required. Turbo and Warp 25 speed are entirely independent of the cartridge with SUPERBOOT.

● **SIMPLE TO USE:** Just press the button and make a complete backup – tape to disk, tape to tape, disc to tape, disk to disk. THE PROCESS IS AUTOMATIC – JUST GIVE THE BACKUP A NAME.

● **TURBO RELOAD.** All backups will reload at turbo speed, COMPLETELY INDEPENDENTLY OF THE CARTRIDGE.

● **SPRITE KILLER.** Make yourself invincible. Disable sprite collisions – works with many programs.

● **PRINTER DUMP.** Freeze any game and print out the screen. Eg. loading picture, high score screen etc. Works with most printers. MPS 801, 803, Star, Epson etc. Double size, 16 shades, reverse print option. Very versatile – no user knowledge required.

● **PICTURE SAVE.** Save any Hires multicolour screen to disk at the push of a button. Compatible with Blazing Paddles, Koala, Artist 64, Image System etc.

● **SPRITE MONITOR.** Unique Sprite monitors allows you to freeze the action and view all the sprites, watch the sprite animation, save or delete any sprite. Load sprites from one game into another to make customised programs.

● **POKES/CHEAT MODE.** Press the button and enter those pokes for extra lives etc., then restart the program or make a backup. Ideal for custom games.

● **MULTISTAGE TRANSFER.** Even transfers multistage programs from tape to disk. The extra parts fast load – a unique feature. Enhancement disk available for non standard multi-loaders (see below).

● **SUPER COMPACTOR.** Ultra efficient program compaction techniques. Each program saved as a single file. 3 programs per disk side – 6 programs per disk, if you use both sides.

● **TEXT MODIFY.** Change title screens, high score screens etc. Put your own name into a game then restart it or make a backup to tape or disk. Very simple to use.

● **MONITOR.** Full feature 'Floating' type MACHINE CODE MONITOR. All standard features plus many more:- assemble, disassemble, hex dump, interpret, transfer, compare, fill, hunt, number conversion, bank switching, relocate, load/save etc. Uses no memory. Full printer support.

● **DISK MONITOR.** A special monitor for use on the RAM inside your disk drive. All the usual commands – a useful hacking tool.

● **WHOLE DISK COPY.** Copy a full unprotected disk in under two minutes with only one drive.

● **FAST FILE COPY.** Works with standard and Warp 25 files of up to 249 blocks. Converts formats to and from Warp 25.

● **FAST FORMAT.** Under 20 seconds.

● **TOOLKIT COMMANDS.** A whole range of useful new commands including: AUTO LINE NUMBERING, DELETE, MERGE, APPEND, OLD, LINESAVE, etc., PRINTERLISTER – list any program (including directory) directly from disk to printer or screen without corrupting memory.

● **REDEFINED FUNCTION KEYS.** Single stroke commands for operation of many common commands including: LOAD, SAVE, DIR. Load from directory – no need to type in filename.

● **TAPE TURBO.** Designed to make turbo load/save for your own programs. No screen blanking during loading.

REMEMBER all features are built in and available at the touch of a key. All features work with both **TAPE** and **DISK**. (Except multipart transfer & disk file utility).

WHAT THE
REVIEWERS SAID
"I'm stunned, amazed
and totally impressed. This is
easily the best value for money
cartridge. The cartridge king!"
Commodore Disk User

ACTION REPLAY ENHANCEMENT DISK

The biggest and best collection of special parameters and file copy programs for transferring non-standard multi-load tapes to disk – games like **LAST NINJA, CALIFORNIA GAMES, LEADERBOARD, DRAGON'S LAIR** – SEVENTY titles in all. Almost all major titles covered. Latest edition includes **COMBAT SCHOOL, PLATOON, PREDATOR, GAUNTLET II, TESTDRIVE, SKATE OR DIE, APOLLO 18, THE TRAIN** and many more. Cheats for infinite time, lives etc. The **GRAPHIC SLIDESHOW** – latest edition displays multicolour pictures or loading screens saved by Action Replay or any major Art Package – Blazing Paddles, Koala, Advanced Art Studio, Artist 64 etc. Lots of fun. Only **£7.99**. Upgrades – send £3.00 plus old disk.

WARP TAKES A QUANTUM LEAP ACTION REPLAY IV HAS ARRIVED!

FOR
CBM64/128

WILL BACKUP MORE PROGRAMS THAN ANY RIVAL UTILITY.

**BUT THATS NOT ALL ... NOW AVAILABLE FOR THE SERIOUS PROGRAM HACKER
ACTION REPLAY IV 'PROFESSIONAL'™**

● All the features of the normal Action Replay IV but with an amazing on board LSI LOGIC PROCESSING CHIP. Plus 32K operating system ROM and 8K RAM CHIP. The first RAM/ROM based cartridge of its type!

ALL THE MK IV FEATURES PLUS ...

● FULLY INTEGRATED OPERATION.

The MK IV 'Professional' has all the features of the MK IV plus an onboard custom LSI LOGIC PROCESSING CHIP that integrates the whole range of utilities and makes them available at the press of a button at any time.

● EXTENDED MONITOR.

The 'Professional' has an extra powerful machine code monitor. Because it has both ROM and Ram at its disposal the Professional can freeze any program and then examine the WHOLE OF COMPUTER MEMORY in the frozen state including screen RAM, ZERO PAGE and STACK.

Full feature disassembly, compare, fill, transfer, hunt, relocate, jump etc, etc. In fact all the features of the best fully blown monitor available. Return to the frozen program at the press of a key at the point you left it! An absolute must for the program hacker - or even the programmer who needs to de-bug his program.

● INTELLIGENT HARDWARE

The Professional hardware is unmatched anywhere in the world today. The special logic processing chip can cope with protection methods as they appear by reacting to its environment.

● RAM LOADER

In addition to Warp 25, the AR4 Professional now has RAMLOADER. Making use of its onboard 8K Ram the Professional can also load commercial disks directly at up to 25 times normal speed. Remember this feature is in addition to AR4's unique Warp 25 feature that reloads all backups at 25 times speed.

WARP 25

Reloads an
average BACK-UP
in 6 Seconds!!

**MK IV
PROFESSIONAL
ONLY £34.99
POST FREE**

UPGRADE INFORMATION

MK III TO MK IV. Just send \$9.99 and we will send you the new MK IV Chip to plug into your cartridge. Fitting is very easy.
MK III TO MK IV 'PROFESSIONAL'. Send your old cartridge plus £19.99 and we will send you a new Professional MK IV.

MK 2 Action Replay owners can get £10 as part exchange against either the MK IV or Professional. Send old cartridge plus balance.

PERFORMANCE PROMISE

Action Replay will backup any program that any other cartridge can backup - and more! It also has an unmatched range of onboard features. Before you buy check our competitors ads to see what they offer and see how many of the Action Replay MK IV features are either not there or have to be loaded from Supergate disks etc. When you buy Action Replay if you don't find our claims to be true then return it within 14 days for a full refund.

The Great Giana Sisters

When I was but knee high to a hedge-hopper, I can remember all the nasty things my parents used to say as they cajoled, threatened, beat me up and pleaded with me in an attempt to get me to go to bed. 'The bogey man will get you if you don't go straight to sleep,' and Father Christmas won't come if you're not good.

These threats only pertained to sleep itself though. The only reference to dreams that I can remember came from my grandmother who insisted that I would suffer from the most horrible nightmares if I ate cheese just before my nightly encounter with the bogey man.

If there is any truth in these stories, then the Giana sisters must have been shovelling down their parmesan suppers just as fast as their little fists could stuff it into their mouths! What started off as a dream has soon turned into a nightmare. Captured within a mysterious world, their only means of escape is to discover the whereabouts of a fantastic jewel. Finding it means that they will safely wake up at the other end of their journey, failure results in them never escaping from their worst visions.

The game is a variant on the old platform theme that seems to be making a bit of a comeback lately. Giana (her sister only comes into play in the two player version) must make her way across thirty-two sections as she attempts her quest.

The old restrictions of typical platform games have largely been removed. No longer do you have to make pixel perfect leaps or time very move down to the last split-second. Instead, you can travel across a section however you want with the one proviso that you cannot go back on yourself – the screen only scrolls one way.

Each section has to be completed within a set time limit. Failure results in the loss of a life, as does the more obvious calamities such as collision with a monster or falling off into a no-go area. Completing a section is not too difficult. What causes the problems is the pressure put on you to go out of your way to collect various objects.

Foremost amongst these are the diamonds that lie scattered about. Most of these are fairly accessible but there are usually one or two strategically placed to lure the careless jumper to their doom. There are also special bricks which can be head butted from below to release either another diamond or a bonus object.

The fascination with diamonds stems from the fact that you gain an extra life for every 100 you collect. The bad news is that this counter resets to zero every time you die.

The bonus symbols consist of lightning and double lightning bolts allowing Giana to fire dream-bubbles, gain extra lives, enjoy temporary fire resistance or have the ability to either put assorted nasties to sleep or make

them vanish entirely.

Perhaps the most interesting feature in the initial stages of the game is the fire wheel. This transforms the sweet, innocent Giana into a vicious punk rocker with the ability to leap up and head-butt her way through solid rock as a useful way to collect extra diamonds. As with the diamonds, any of these bonus features disappear when you lose a life.

The levels steadily increase in difficulty so that there is always a challenge to face. Monsters can be jumped on, instead of merely having to jump over them all the time, although this can be a problem where there are several of them or you have a row of bricks over your head.

Look forward to encountering invisible items, dragons and hidden magic plus one extra feature without which, no platform game would be complete – the collapsing bridge.

One annoying feature is the lack of a save facility or a password system allowing you to skip levels previously completed. Whereas many other games offer a pause, this, too, is something that is missing from the C64 version. The graphics have been kept fairly simple and the screen has a very welcome, uncluttered feel to it.

The Great Giana Sisters is an excellent platform game and one which is, as the blisters on my joystick hand will testify, extremely addictive.

GRH

Title: The Great Giana Sisters

► BASIC 8

Unleash the hidden graphics power of your 128. At last, your Commodore 128 can rival the 16 bit micros! Imagine your 128 in 80 columns producing a resolution of 640 x 200 in mono and 640 x 192 in 16 colours without any additional hardware! (640 x 400 version available soon.) Sounds impossible? Not with Basic 8, the new graphics language extension.

Basic 8 adds over 50 Hi-Res graphic commands to C128 Basic. Just select one of the many graphics modes and draw 3-D lines, boxes, circles and a multitude of solid shapes with a single command. We've even added commands for windows, fonts, patterns and brushes.

To demonstrate the power and versatility of this graphics language, we have created Basic Paint, a flexible icon-based drawing application program. Basic Calc, a full featured spreadsheet and Basic Write a simple to use word processor with a multitude of fonts. Also included is an icon based desk-top utility which provides quick and convenient access to each of your own Basic 8 creations.

All this graphics potential is yours for **£34.95**, 64k Video RAM upgrade kit **£29.95** and The Beginners Guide to Basic 8 with disk **£19.95**. Basic 8 Tricks & Tips Volume 1 **£4.65**.

► 1541/71 Disk Drive Alignment Package

Problems with your disk drive? The alignment package reports the alignment condition of the disk drive as you perform adjustments. On screen help is available while the program is running. Includes features for seed and head stop adjustment. Allows you to test each full and half track as you realign the drive. Complete instruction manual on aligning both 1571 and 1541 drives. Even includes instructions on how to load the alignment program when nothing else will load. Works on the C64, SX64 and 128 in 64 or 128 mode. **Only £24.95.**

► 1571 FIX ROM

Are you experiencing any of these problems with your 1571 disk drive, Errors when using Superbase? Device Not Present Errors? Major problems when 2 or more open files? Takes forever to recognize a floppy disk? If you have one or more of these problems then you need 1571 FIX ROM, developed by Commodore Inc USA, just plugs in, solves over 19 main problems. **Only £24.95.**

► Commodore 1581 Disk Drive

The New Commodore 1581 drive is now available for the C128 or C64. This drive offers one megabyte of memory, THREE THOUSAND ONE HUNDRED AND SIXTY blocks free, (800K formatted capacity), and a very fast EIGHT THOUSAND Characters per second loading rate. Software for this new drive includes, VizaWrite Classic, HackPack, Petspeed, Oxford Pascal, CAD PAK, Chart Pack, Fontmaster, Spellmaster and much more. Using a package called Super 81 Utilities most software can simply be copied across to the new format. The drive is available for **£184.95.**

► Warp Speed

An incredible accelerator cartridge for the Commodore 128 and 64. Warpspeed has a switch that allows you to select 128 or 64 mode. The features of this cartridge apply to 1541, 1570, 1571 and 1581 disk drives in 64 or 128 mode. These features include loading, saving, formatting and verifying 10 times faster, extended DOS commands, print screen, disk and file copy, built in machine monitor, built in track and sector editor and much more. **Only £34.95.**

► The Big Blue Reader

New from SOGWAP Software Inc., The Big Blue Reader is ideal for those who use IBM PC compatible computers at work and have the Commodore 128 or 64 at home. The Big Blue Reader is not an MS-DOS emulator, but rather a unique and easy way to transfer word processing, text and ASCII files between two totally different formats, Commodore and MS-DOS. The Big Blue Reader requires a 1571 on both the Commodore 128 and 64 and will not work with a 1541 or similar drive. **Only £34.95.**

► The Drive Box

The drive box allows you to easily change the device number (8, 9, 10, or 11) of your 1541, 1571, 1570 or 128D computer. It will, as a bonus, allow you to bypass the write protect sensor, allowing you to write to the back side of the disk without cutting a notch. Installation requires a little soldering. **Only £19.95.**

► The Programmers Notebook

The Programmers Notebook is a high speed data storage and retrieval system designed specially for the programmer. With Programmers Notebook you can develop a special programming information database tailored to your own needs. It will provide a means of indexing your short routines and other programming information. Each entry has a brief description, date and type of routine. Once entered you can conduct tailored searches on the entire database, in fractions of seconds, looking for any information you select. It will sort, compile, display and provide printed copies in almost any format you desire. **Only £24.95.**

► Home Designer 128

Forget the name this is not a kitchen planner, it is probably the most advanced CAD system for the C128 computer. Home Designer allows you to create extremely detailed and accurate drawings at virtually any scale, with any resolution approaching a plotter. It offers accurate scaling, a powerful command set and up to five drawing layers. Why is Home Designer better than the rest? It is the only CAD system which allows layers of diagrams to be drawn and then laid upon each other in any order. Home Designer has an advanced zooming feature, allowing you to actually increase the drawing resolution, unlike other programs which simply display fat dots on the screen. Most dot matrix printers and plotters are supported and Home Designer works with a Commodore 1351 mouse. **Only £34.95.**

► Super Pack 2

Super Pack 2 is the combination of three packages, Pocket Writer, Filer and Planner. The integrated word processor, spreadsheet and database work on the Commodore 64 or 128 in 40 or 80 columns. Each package has all the features you would expect, plus a few you would not. The word processor displays on screen bold, underline, italics, sub and super script fonts as you type. The spreadsheet includes a sideways printing feature as well as 16 digit accuracy, plus a graphics module to produce bar, line and pie charts quickly and easily from your data. The database includes a report writer to create your own professional reports. Full details available on request. Super Pack 2 by Digital Solutions Inc is available for only **£64.95** or **£39.95** each.

► Super Disk Librarian

Super Disk Librarian will catalogue up to 1,000 disks and 15,200 programs. Do you have a lot of disks full of programs? Have you ever lost a program which you knew you had somewhere? Then Super Disk Librarian will provide you with a simple means of sorting and indexing the file names. Once the disks have been catalogued, numerous reports and lists can be printed and the library sorted and searched. Super Disk Librarian for the Commodore 128. **Only £29.95.**

► The CP/M Kit & Users Guide

The CP/M Kit introduces and explains the unknown, third mode of the C128. The CP/M Users Guide is a 300 page book by Abacus Software covering all aspects of CP/M. Subjects which include the system disk, resident commands and disk copying are described in detail. The CP/M kit contains over 20 CP/M programs including a word processor, chess game and a disk cataloguing program accompanied by a detailed guide to running programs in CP/M. The CP/M kit and Users Guide. **Only £34.95.**

► Super Disk Utilities

The ultimate utilities disk for the 1571 disk drive and C128 computer. Copy whole disks with 1 or 2 drives, change disk format, perform CBM DOS, CP/M and MS-DOS utility functions, scratch, unscratch, lock and unlock files, write protect disk, contains disk editor, drive monitor, unique RAM writer and more. **Only £24.95.**

POOLSWINNER II

THE ULTIMATE POOLS PREDICTION PROGRAM

- MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years.
- PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- LEAGUE AND NON-LEAGUE** All English and Scottish League teams are supported, and also the non-league sides often used on pools coupons.
- PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

PRICE £18.00 (all inclusive)

NOW AVAILABLE

FIXGEN 88/9 AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish League fixtures for 1988/89. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.

POOLSWINNER with FIXGEN £19.50 (for both)

COURSEWINNER v3 NOT JUST A TIPSTER PROGRAM. Coursewinner V3 can be used by experts and occasional punters alike. You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date. FULL PRINTER SUPPORT.

PRICE £18.00 (all inclusive) includes Flat AND National Hunt versions.

AVAILABLE FOR AMSTRAD CPCs, BBCs, COMMODORE 64/128, SPECTRUM, DISCS... (Add £3.00), AMSTRAD PCW, IBM Format, COMMODORE AMIGA, ATARI ST

Unlock Hidden 128 Powers

Learn how to use the full 128 keyset in 64 mode
By Dave Garside

Like a lot of 128s mine spends a fair amount of its time in 64 mode, and I've always been slightly annoyed that the keyset available in the other two modes of the computer is not implemented in 64 mode. Especially as there is actually no reason why the additional keys should not be available, except that to do so would have involved Commodore producing a patch for the 64 Kernal. This article shows how with a bit of prodding in the right place the full 128 keyset can be made to work in the 64 mode.

The standard 64 keyset is arranged in an 8 by 8 matrix. This matrix is read through the I/O ports of CIA 1; the relevant control registers are register 0 and register 1, which are mapped to \$DC00 and \$DC01 respectively. Briefly each bit in register 1 corresponds to the state of a key connected to each line. Now because we are dealing with an 8 bit machine, it should be clear that there can only be 8 lines of 8 keys: hence the 8 by 8 matrix, with simple arithmetic showing that only 64 keys can be read using this system. Note that the standard 64 keyset has 66 keys, but two, SHIFT-LOCK and RESTORE, are hardwired and separate from the main keyset.

In order to provide the additional keys, Commodore have built in an extra three control lines. Now, presumably in the interest of preserving compatibility, these lines are connected to the 40 column video chip and controlled through register 47 which is mapped onto the address

\$D02F and is active in 64 mode. Therefore by the use of appropriate software it is possible to read and process the full keyset.

Program 1 provides a wedge that will read extra keys and provide a value indicating which key has been pressed in the variable 'KEY'. The correspondance between key and value returned is given in Table 1. Program 2 provides an example of how the keys could be processed. The example places the ASCII value of the key pressed into the keyboard buffer in much the same way as standard key presses are processed. Non standard keys like 'ESC' are ignored. However a different set of processing could treat the additional keys as 24 extra function keys (more if 'shift' type operations are included).

As well as the source code for the two programs I've included two BASIC loaders which provide relocatable code for program 1 and Programs 1 and 2 combined for people without assemblers. To use, simply type in the programs, save and then run. The loader will then convert the BASIC data into a machine code file, prompt for a file name and output device, and finally save out the machine code version of the program.

When the program is reloaded and run, the relocater will prompt for a start address, the address should be in normal RAM (i.e. not under BASIC) or the Kernal, or between \$0800 and \$0A00) and should be specified in hexadecimal starting at a page boundary (i.e. \$4000, \$4100, \$4200 etc). The program will relocate to that

address and then prompt for a decision on whether to run the program. A negative reply will result in the SYS address of the program start being supplied in decimal ready for later activation.

Table 1

Value in KEY	Key pressed
0	HELP
1	8
2	5
3	TAB
4	2
5	4
6	7
7	1
8	ESC
9	+
10	-
11	LINE FEED
12	ENTER
13	6
14	9
15	3
16	ALT
17	0
18	.
19	cursor up
20	cursor down
21	cursor left
22	cursor right
23	NO SCROLL
255	no key pressed

NB. CAPS LOCK and the 40/80 DISPLAY keys are hardwired and not detected through the keyboard matrix.

See listing on page 63

First Steps

How to make sense of errors and input operations

Although many computer error messages relate to communications with peripherals, the majority are linked to faults that can arise in Basic programs. These may be broken down into three main areas.

The first area is mathematical errors which are relatively easy to correct. Then there are errors relating to inputs and character strings which are normally the fault of the program user but ultimately the responsibility of the programmer. Finally, there are operational errors which is always the programmer's fault and can be very difficult to correct.

The final category will form the subject of a whole article in a later issue of Your Commodore. In this article we'll concentrate on the input errors.

String too long

The maximum length of a string is 255 characters. Input from the screen through the INPUT statement is limited to less than 80 characters but use of the GET statement or string concatenation should be carefully planned during programming.

Weak areas are open ended statements such as:

```
10 GET A$:IF A$="" THEN 10
20 IF A$=CHR$(13) THEN 40
30 B$=B$+A$:GOTO 10
```

The computer will carry on build-

ing the B\$ string as long as the user is willing to type away at the keyboard. It is possible that the 255 character limit would soon be exceeded so a trap is needed:

```
25 IF LEN(B$)=255 THEN
PRINT"INPUT TOO LONG.
PLEASE TRY AGAIN":B$=""
```

If the input is deliberately long a different approach can be employed by using a routine like this:

```
10 X=0
20 GET A$:IF A$="" THEN 20
30 IF A$=CHR$(13) THEN 60
40 IF B$(X)=255 THEN X=X+1
50 B$(X)=B$(X)+A$:GOTO 20
60 FOR A=0 TO X:PRINT B$(A);
NEXT
```

Type mismatch

This occurs when an alphabetic character is typed in instead of a number. It can also occur within a program when a statement such as A\$=A or A=A\$ is used. The correct syntax would be A\$=STR\$(A) or A=VAL(A\$). In the second case, the value would only be those of any numbers at the beginning of the string. If A\$ starts with a letter it will not be suitable, even a floating point number such as 2.1E+30 would only be returned as 2.1 by this construct.

Extra ignored

This means that an input statement has received too many items. For example:

```
10 INPUT"LENGTH, BREADTH";
L,B
```

The extra information would be ignored if the input was 12,10,12. Only two items were expected but three were received.

This is a particular nuisance when string inputs are required:

```
10 INPUT"THE SECRET OF
LIFE";SL$
```

A possible response could be:

KEEP BREATHING, STUPID

The comma would confuse the computer into believing that STUPID was a separate input and this error would be flagged as extra ignored.

With strings it is usually best to use the GET A\$ method because it's easier to error trap and accommodate commas, colons and semicolons.

Redo from start

Usually this arises when string data was typed in but numeric data was requested: a response such as 'seven' instead of '7'.

This error is fairly friendly because it does not crash the program but waits patiently for the user to twig to the correct keying-in procedure.

It can also occur when the HOME key is struck instead of DEL, sending the cursor to the top of the screen. This is read as a valid entry along with the copious keypresses which generally follow as the user replaces the cursor to the correct place.

As long as the user realises what the message means everything should be resolved by simply re-inputting the correct information.

Bad subscript

If any array element oversteps the preset limit the computer cannot cope and resorts to this message.

All variables automatically have the facility to have eleven elements such as A(0) to A(10). If A(11) is accessed the eleven is known as a bad subscript. If A(11) is needed, then a DIM statement will have to be placed at the beginning of the program.

The next set of errors contain the most commonly occurring messages of doom and form the operational error set. They can also be the hardest to track down so the next First Steps will be devoted to these important and irritating missives.

William Tell

*Can you fight off the
Austrian soldiers?
Only time will tell*

It's not often that a game meets our stringent standards but it was like a bolt from the blue when David Light made overtures with William Tell, we couldn't resist.

The program is entirely written in machine code and uses multiple sprite techniques to produce a game of fast reactions and joystick-gripping excitement.

William Tell's son has been captured by the Austrians and imprisoned in the deepest dungeon of the castle. Armed with a limited supply of crossbow bolts, you have to help Tell to rescue the apple of his eye.

The first stage of the game involves the collection of two keys which unlock the doors to the dungeons. Both keys are to be found hanging up outside the guardrooms located at either end of the battlements. The battlements are patrolled by armed guards who can either be shot with your crossbow or jumped over if your timing's good. Occasionally you must replenish your supply of crossbow bolts by jumping up and collecting them. Timing your jump is vital because arrows and cannonballs are whistling overhead. Once you've got the keys, fight your way back to the ladder and then you can descend to the courtyard.

The second stage means fighting your way across the courtyard to one of the dungeon entrances which are at either side of the courtyard. It's up

to you which entrance you choose but you must be in possession of both keys because the doors are double-locked. In addition to more swordsmen, you also have guards armed with longbows shooting arrows at you. The only way of avoiding these missiles is to jump over them but it's important that you replenish your supply of crossbow bolts during the first stage on the battlements because there are no more supplies until you enter the dungeons. If you have less than ten bolts remaining, the indicator starts flashing as a warning and you may have to return to the battlements to re-arm.

The final stage of the game takes place in the dungeons themselves. Here you have to collect 55 apples while being pursued relentlessly by intelligent guards who are also armed with longbows. You can shoot the archers and deflect their arrows with your own crossbow bolts but don't try to jump over the guards or their arrows. There are ample stocks of crossbow bolts distributed around the dungeons to replenish your supply.

Other hazards lurk deep within the dungeons, spinning blades appear that will chop you up if you walk or jump onto them. After frantically jumping over the blades and avoiding the guards, you may find an area in the dungeons where it seems you are safe from the pursuing guards but you could be in for a nasty surprise if you linger in one spot for too long! When

you have collected all the apples you will be directed towards the exit where your son is waiting for you to shoot the final apple off his head.

Whether you complete the game, lose all your lives or the countdown timer reaches zero, you will be given the opportunity to enter your initials in the Hall of Fame as long as your score is greater than those already there. Use the joystick to scroll the alphabet left or right and press fire to select any three letters.

The program has 25 different screens (21 of which are scrolling) and three separate levels. Once the game has loaded, an animated title page which uses 24 sprites is displayed. When the animation is complete, the Hall of fame screen appears.

Getting it all in

Type in and save the programs in the order they are printed, following the instructions given. To start the game, press the fire button on the title or Hall of Fame screens. The title screen will be re-displayed at the end of each game once the Hall of Fame has displayed the top ten scores. Pressing RUN/STOP and RESTORE will abort the current game and return the title screen. The Hall of Fame scores will not be lost.

Are you bold enough to face this challenge? Can you save the boy? Who can? Tell!

DATEL ELECTRONICS

256K SUPEROM EXPANDER

- Now you can select from any of 8 32K EPROMs instantly.
- 8 sockets to accept upto 32K EPROM in each.
- On board operating system - no programs to load.
- Program your own EPROMs using our EPROM programmer.
- No need to have loads of cartridges - just make a selection from the Superom menu.
- Directory of utilities on power up.
- Fully menu driven on power up.
- Select any slot under software controls.
- Unique EPROM generator feature will take your own programs - basic or m/c and turn them into autostart EPROMs. (EPROM burner required).
- Accepts 2764/27128/27256 EPROMs.
- On board unstoppable reset.

ONLY £29.99

RESET CARTRIDGE

- Unstoppable reset button.
- Resets even so called "unstoppable" programs.
- Add pokes from magazines etc.
- Fits in cartridge port.
- Simply plug in.

ONLY £5.99

16K EPROM BOARD

- Accepts 2 x 8K EPROMs.
- Switchable to configure as 2 x 8K or 16K or off.
- On board unstoppable reset.
- Full instructions.

ONLY £8.99

DISK NOTCHER

- Quickly and easily double your disk capacity.
- Use both sides of your disks.
- Simple to use.
- Takes seconds.

ONLY £4.99

DUPLIKATOR™

- Copies whole disk in one pass - only one drive required!
- Makes backup copies in eight seconds!!
- Duplikator is the fastest, most efficient and easiest to use disk copying system ever conceived.
- Comes complete with 256K on-board ram and it's own operating system - no software to load.
- Makes multiple copies from one original.
- Full disk verification during backup process.
- Copies standard software as well as errors 21-29 and upto 40 tracks.
- Full disk error check in eight seconds.
- Full disk verify against ram in fifteen seconds.
- A must for clubs, user groups etc. How else can you copy over 250 disks and hour for less than £100.
- Comes complete with on/off switch and reset button.
- Fitted in minutes - no soldering usually required.

ONLY £89.99

4 WAY KERNAL BOARD

- This board fits in place of the kernal in your 64 and accepts a 16K or 32K replacement kernal giving 2 or 4 different operating systems.
- Just flick the switch supplied to select between systems.
- This is a carrier only - ready to accept your own chip.
- Now you can have all your different systems available at one time.
- Full instructions.
- Fitted in minutes.
- 5-Way Board

ONLY £12.99

DEEP SCAN BURST NIBBLER™

- The most powerful disk nibbler available anywhere, at any price!
- Burst Nibbler is actually a two part system - a software package and a parallel cable to connect the 1541/1570/1571 to 64/128 (state type).
- What gives Burst Nibbler its power? Conventional nibblers have to decode the data from the disk before it can transfer it using the serial bus - when non standard data is encountered they are beat. Burst Nibbler transfers data as raw GCR code via the parallel cable without the need to decode it so you get a perfect copy of the original.
- Will nibble upto 41 tracks.
- Copy a whole disk in under 2 minutes.
- Full instructions.
- Regular updates - we always ship the latest.
- Fitted in minutes - no soldering usually required.
- Full or 1/2 tracks.
- No need to buy parallel cable if you have Disk Demon/Dolphin etc.
- Cable has throughbus extension for other add ons.

Whether to choose FastHack'em or Burst Nibbler? Fast Hack'em is unbeatable value as an "all-rounder" - with nibblers, 1 or 2 drive copy, format, file copy, 1571 copy etc. etc., so if you have a more general requirement perhaps FastHack'em is for you. Burst Nibbler is a pure nibbler second to none, for the reasons stated. So if it's just making backups you are interested in, there is no other product to beat it.

ONLY £24.99 COMPLETE

SOFTWARE ONLY £12.99 CABLE ONLY £14.99

BURST NIBBLER PARAMETERS DISK

- Burst Nibbler is the most powerful disk copier available - but there are still a few programs with very complicated protected, which makes it impossible to nibble copy. The Burst Nibbler Parameters Disk contains routines to copy individual programs.
- Used in conjunction with Burst Nibbler even the latest highly protected programs can be backed up.
- The disk contains over 100 parameters including many of the latest titles. Many of the titles can already be straight nibbled by burst nibbler - but can be used with the "Super Serial Nibbler" program (supplied) by users with drives that will not support parallel copier cables such as Exocelerator, Oceanic etc.
- Remember - this disk is by no means a must for Burst Nibbler owners since it already copes with over 90% of Software. But for those who want everything this is it. Also for none Burst Nibbler owners you get a "Super Serial Nibbler" which together with the parameters is a powerful utility.
- Simple to use - just nibble the disk then run the individual parameter for that program and the special routine will produce a perfect working copy - in some cases it will even de-protect it!
- Comes complete with "Super Serial Nibbler" program for users who can't fit a parallel copier such as Burst Nibbler to the drive (Exocelerator, Oceanic etc.), not as fast as Burst Nibbler but when used in conjunction with parameters its formidable.

COMPLETE PROGRAM DISK # 1 AVAILABLE NOW ONLY £12.99

TOOLKIT IV

The ultimate disk toolkit for the 1540/1541

- A disk toolkit is an absolute must for the serious disk hacker. Toolkit IV has more features than most for less.
- DISK DOCTOR V2 - Read and write any track and sector including extra and renumbered tracks. Repair damaged sectors. Look underneath read errors.
- HEADER/GAP EDITOR - Decodes and displays ALL header information including off bytes and header gap. Rewrite the entire header and header gap. Renumber sectors. Also edit any sector tail gap.
- DISK LOOK - Sort directory. Recover lost files. Display file start/end addresses. Disassemble any file program directly from the disk to SCREEN or PRINTER including undocumented opcodes. Edit Ram. Much, much more.
- FILE COMPACTOR - Can compact machine programs by up to 50%. Saves disk space. Compacted programs run as normal.
- EAST DISK COPY - Copy an entire disk in 2 minutes or less using single 1541.
- EAST FILE COPY - Selective file copy. Works at up to 6 times normal speed.
- FORMATTER - 10 second format an entire disk or format any individual track or half track 0 to 41. Redefine any of 30 parameters to create or recreate unique disk formats.
- ERROR EDIT - Quickly find and recreate read errors including extra and renumbered tracks or sectors and half tracks from 0 to 41. Even recreates data under errors and allows you to redefine any necessary parameters.

ONLY £9.99

DATTEL ELECTRONICS

3 SLOT MOTHERBOARD

Save wear and tear on your Expansion Port

- ☐ Accepts 3 cartridges.
- ☐ Onboard safety fuse.
- ☐ Switch in/out any slot.
- ☐ High grade PCB.
- ☐ Fully buffered.
- ☐ Reset button.

ONLY £16.99

DATA RECORDER

- ☐ Quality Commodore compatible data recorder.
- ☐ Pause control.
- ☐ Suitable for 64/128.
- ☐ Counter.
- ☐ Send now for quick delivery.

ONLY £24.99

SMART CART™

Now you can have an 8K or 32K cartridge that you program like RAM then acts like ROM!

- ☐ 8K or 32K pseudo ROM.
- ☐ Battery backed to last up to 5 years (lithium battery).
- ☐ Simply load the program you require — then flick the switch. The cartridge can then be removed just like a ROM cartridge.
- ☐ Make your own cartridges including autostart types — without an EPROM burner.
- ☐ Can be switched on or off board via software.
- ☐ I/O 2 slot open for special programming techniques.
- ☐ 32K version has 4 x 8K pages.
- ☐ Some knowledge of M/C is helpful — but full instruction are provided.

8K VERSION £14.99

32K VERSION £29.99

RAM DISK

- ☐ Turn your Smart Cart into a 32K RAM/disk.
- ☐ 32K of instant storage area for files/programs.
- ☐ Load/save instantly.
- ☐ Disk type commands: load, save, directory, scratch.
- ☐ Program data retained when computer is switched off!
- ☐ Full command set with instructions.

ONLY £9.99

CENTRONICS PRINTER LEAD

- ☐ Connect your 64/128 to a full size Centronics Parallel Printer.
- ☐ Suitable for use with Action Replay IV or Final Cartridge III.
- ☐ Also works with any Software/Graphics package that has parallel driver software built-in — this includes many popular wordprocessors, databases, etc.
- ☐ Top quality connections — ribbon cable 1.8m long.

ONLY £12.99

BLAZING PADDLES

A complete lightpen/graphics illustrator package.

- ☐ A fully icon/menu driven graphics package of a calibre which should cost much more.
- ☐ Complete with a fibre optical lightpen system for pin point accuracy.
- ☐ Multi feature software including:
 - Range of brushes • Airbrush • Rectangle • Circle • Rubberbanding • Lines • Freehand
 - Zoom mode • Printer dump • Load/save • Advanced colour mixing — over 200 hues!!
 - Cut and paste allows shapes/windows/pictures to be saved to/from tape/disk.
- ☐ Blazing Paddles will also work with many other input devices including: Joysticks, Mice, Graphics Tablets, Trackball etc.
- ☐ Pictures can be saved from Action Replay and edited with Blazing Paddles.

Complete Blazing Paddles & Lightpen **ONLY £24.99**

Blazing Paddles available separately for **£12.99**

GRAPHICS SUPPORT UTILITIES DISKS

• A range of utilities to make the most of your high res pictures created with popular graphics utilities or captured with Action Replays unique picture grabber.

• SLIDE SHOW

- View your favourite screens in a slide show type display.
- Move from screen to screen — keyboard or joystick control.
- Very easy to use.

• BLOW UP™

- A unique utility to allow you to take any part of your picture and 'blow it up' to full screen size.
- Even fills the border with powerful sprite handling techniques.
- Very easy to use — simple commands
- An interesting utility.

TURBO ROM II

Turbo Rom II is a replacement for the actual kernal inside your 64. It provides superfast load/save routines.

- ☐ Loads most programs at 5-6 times normal speed.
- ☐ Saves at 5-6 times normal.
- ☐ Improved DOS support including 10 sec format.
- ☐ Programmed function keys: load, directory, old, etc.
- ☐ Return to normal kernal at flick of a switch.
- ☐ FCOPY — 250 block file copier.
- ☐ FLOAD — special I/O loader.
- ☐ Plus lots more.
- ☐ Fitted in minutes — no soldering usually required. (On some 64's the old ROM may have to be desoldered).

ONLY £14.99

DIGITAL SOUND SAMPLER

- ☐ The new sampler allows you to record any sound digitally into memory and then replay it with astounding effects.
- ☐ Playback forwards/backwards with echo/reverb/ring modulation etc.
- ☐ Now with full sound editing module to produce outstanding effects.
- ☐ Full 8 bit D to A and ADC conversion.
- ☐ MIDI compatible with suitable interface. (I.e. Datel unit for £29.99, see ad).
- ☐ Live effects menu includes real time display of waveforms.
- ☐ Line in/mic in/line out/feedback controls.
- ☐ Powerful sequencer with editing features.
- ☐ Load/save sample.
- ☐ Up to 8 samples in memory at one time.
- ☐ Tape or disk (please state).
- ☐ Complete software/hardware package **£49.99**
- ☐ Com-Drum software is available separately at **£9.99** to turn your Sampler II into a Com-Drum system as well as a sampling system.

COM-DRUM Digital Drum System

- ☐ Now you can turn your computer into a digital drum system. ☐ Hardware/software package.
- ☐ 8 digital drum sounds in memory at one time.
- ☐ Complete with 3 drum kits.
- ☐ Real drum sounds — not synthesised.
- ☐ Create superb drum rhythms with real and step time. ☐ Full editing! ☐ Menu driven.
- ☐ Output to hi-fi or through tv speaker.
- ☐ Load/save facilities. (state tape or disk)

COM-DRUM EDITOR

- ☐ 24 drum sounds supplied on disk to enable you to construct your own drum kit.
- ☐ Re-arrange sounds supplied with a Com-Drum to make new kits.
- ☐ With sound sampler hardware you can record your own kits. ☐ Load/save facilities.

ONLY £4.99 disk only

MIDI 64

A Full Midi Interface for the 64/128 at a realistic price

- ☐ MIDI in. ☐ MIDI thru. ☐ 2 x MIDI out.
- ☐ Compatible with most leading software packages including: Sell, JMS, Advanced Music System, Joroth, Steinburg etc.

ONLY £29.99

ROBOTEK 64

Robotek 64 is a comprehensive hardware/software package which enables you to connect your 64/128 to the outside world.

- ☐ 4 output channels — each with onboard relay
- ☐ 4 input channels — each fully buffered TTL level sensing
- ☐ Analogue input with full 8 bit conversion.

Model & Robot Control made easy

- ☐ Voice input for voice control.
- ☐ Software features: test mode/analogue measurement/voice activate/digital readout etc.
- ☐ Excellent value! **ONLY £39.99**

including hardware/software/mic etc. (State tape or disk)

DATTEL ELECTRONICS

NEW CLONEMASTER™

The most effective tape to tape back-up board available.

- Makes perfect backups of your tapes easily and effectively!!
- No user knowledge at all needed.
- On board TTL logic circuitry actually shapes the program and sends a perfect signal to the record cassette — producing a copy better than the original in many cases.
- L.E.D. indicator shows when data is being transferred to avoid excessive tape winding.
- Works with almost any program including multi-loaders, turbos and even very unusual type turbos.
- Requires access to two CBM compatible data recorders
- Simply press 'Play' on one recorder and press 'Record' on the other — that's it!
- You can even make a backup while you are loading the program.
- This is a total hardware solution — no programs to load — the results are stunning!

ONLY £9.99

• Datasets are available for £24.99 (see other pages)

BLUE CHIP DRIVE • Fully C64/128 compatible.

- At last a top quality drive at a sensible price.
- Super slimline case
- External power supply for cool operation.
- Direct drive motor
- Supplied complete with all cables — no more to buy.

This drive is now probably the most compatible drive available for the Commodore. More so than even Commodore's own 1541C. Much more so than other so called compatibles. In fact we have been unable to find a program including the latest that would not work. (At time of Press).

No need to look elsewhere — this is the best.

ONLY £139.99 POST FREE
(If you require courier delivery add £8.00).

ULTRA CRUNCHER

The ultimate cartridge based program compactor.

- Compacts by upto 30%!
- More programs for disk.
- 3 compacting programs on one cartridge.
- Fast loading/saving routines — works with Disc Demon.
- Can even further compact AR III files!
- 280 block file copy function.
- Full DOS support including fast format.

ONLY £12.99 on cartridge.
Available as chip only for £8.6K
Superom Board for only £7.99

FAST HACK'EM™

Multi Module Disk Nibbler — all on one disk.

- Single 1541 Nibbler — Copy a disk in 2 minutes.
- Auto Nibbler — Copy an entire protected disk in 3 minutes.
- Super fast File Copy — Under 9 seconds typically.
- Copies with Fat Tracks.
- Superfast Copy — Entire disk in 36 seconds with verify.
- Twin Drive Copier — Even faster!

Plus unique "Parameters" mode. These files "Unlock" the more heavily protected programs with a parameter for a particular brand or even single program.

No other product is such a good "All Rounder" at this price its unbeatable.

ONLY £9.99 POST FREE

ROBOTARM — 5 Axis Movement — Full Function

- Explore the fascinating science of Robotics with this full feature Robot Arm.
- Human like dexterity — with 5 Axis of movement it is so versatile. It can manipulate small objects with amazing ability.
- Easily controlled using 2 Joysticks (any 9 pin type) or connect to your computer with our Interface + Software to give Computer/Robotic control (see Interface offer).
- Comes with Accessories including 'Finger' Jaws, Magnetic Attachment, Shovel Scoop, 4 Stabilizing Suction Base Legs, etc.
- Uses 4 HP2 batteries (not supplied) to power motor movement so uses no computer power.
- Self contained, ready to use (except batts, joysticks).

ONLY £49.99

INTERFACE OFFER

- Unique Software/Hardware package to allow you to interface your computer with the Robotarm.
- Train mode allows you to store and then repeat movement sequences.
- Very easy to use.
- This Interface is not needed to use the Robotarm but interfacing with your computer has great possibilities

ONLY £24.99
COMPLETE WITH CABLES.

EPROMMER 64™

- A top quality, easy-to-use EPROM programmer for the 64/128.
- Fully menu driven software/hardware package make programming/reading/verifying/ copying EPROMs simplicity itself.
- Will program 2716, 2764, 27128 and 27256 chips. 12.5, 21 or 25 volts.
- Fits into user port for maximum compatibility with cartridges/Superom Board etc.
- Full feature system — all functions covered including device check/verify.
- We believe Eprommer 64 is the most comprehensive, most friendly and best value for money programmer available for the 64/128.
- Ideal companion for Superom Board, Cartridge Development System, our kernel expanders or indeed any EPROM base project.
- Comes complete with instructions — plus the cartridge handbook.

Constructing a

To complete the FCL Compiler we present the all-important SYSLIB library file

The SYSLIB library file is given here as a Basic loader program. Unlike ASSEMBLE, you need not change the start of Basic because SYSLIB loads into memory at \$C000, well out of reach of Basic.

Once assembled, your program is ready to be run on the computer; simply type LOAD "PROGRAM-NAME", 8 and then RUN. At runtime, your program expects the library file SYSLIB to be present on the disk. SYSLIB provides most of the facilities required by your program such as error handling and file I/O. The SYSLIB program was written using the FCL assembler and I should point out that all of the problems mentioned back at the beginning of the series occur within this code.

A program can call SYSLIB by loading a service request function number into the accumulator and then calling the library via an indirect jump at memory address \$005E (94). Many of the functions assume that parameters are to be found in one or more of the system variables in zero page and most results are returned in this way. SYSLIB also sets up several buffer areas for file and keyboard I/O, runtime stack and numeric conversion.

It is possible for an end user to 'Patch' into SYSLIB by altering the indirect jump vector mentioned earlier. In this way, extra functions may be added. The user patch would test the value of the accumulator and, if it was one of the new function numbers, would execute the appropriate subroutine, otherwise the normal SYSLIB routines would be called.

The library is first initialised at runtime by a call from the compiled program to the initialised routine at \$C000 (the library lives between \$C000 and \$CFFF although there is some spare memory here). This sets up the memory pointers and buffer areas for runtime operation. The actual zero page addresses of the system variables and pointers are listed in Fig 1.

The addresses of these variables have been carefully chosen so that they don't interfere too much with the resident Basic system. This ensures that a safe return to Basic may be made following execution of a runtime FCL program.

SYSLIB library calls

Fig 2 lists the calls to the SYSLIB program.

To make a call to SYSLIB, Place

the parameters required into the correct system variables, load the accumulator with the function number and execute a JSR \$005E instruction. After execution, any parameters are returned in the stated variables.

As you can see SYSLIB does quite a bit! As I have already mentioned SYSLIB also provides an error messaging facility. When an error occurs, the program will normally halt. When a warning is printed, execution continues although the operating conditions may change and results may not be as expected. All errors and warnings are listed in Fig 3.

Compiler complete

So there you have it. A complete compiler system, albeit a rather simple one. Given time and a lot of patience, many of you may be able to come up with bigger and better (and faster!) compiler systems.

In Fig 4, you will find a couple of example programs to try. They are pretty simple routines but may give you the feel of the language and show you the sort of things you can do.

If you do go on to write a compiler, good luck!

Fig 1 System variables

System name	Purpose	Address
AC1	Numeric accumulator 1	\$03
AC2	Numeric accumulator 2	\$05
SD1	String descriptor 1	\$26
SD2	String descriptor 2	\$3F
UP1	Utility pointer 1	\$FB
UP2	Utility pointer 2	\$FD
APT	Array pointer	\$45
TT1	Temporary variable	\$47
CALLVEC	SYSLIB call vector	\$5E
MEMTOP	Top-of-strings pointer	\$49

The buffer areas are as follows:

OUTBUF	Output buffer (write)	\$9B00
INBUF	Input buffer (read)	\$9C00
STACK	Runtime stack	\$9D00

OUTBUF and INBUF are each 256 bytes in length while STACK is 768 bytes long. The pointer for STACK is held within the area of the stack routines and should not be changed even if you can find it!

Fig 4. Example programs

Program 1. Simple typewriter.

This program uses the charin and charout elements to construct a simple typewriter program which may be terminated by pressing the RUN/STOP key.

```
begin
  cls
  loop
    charout charin (0)
  endloop when stop (0)
end
```

Program 2. Multiplication tables program.

Back to school with this short program to display a multiplication table of your choice.

```
var int count,mult
;
begin
  count=1
  write "Enter table:";
  read mult
  loop
    write count, count*mult
    count++
  endloop when count 12
end
```

Fig 2 SYSLIB library function calls

Function number (A)	Action		
00	PHOENIX. This call will reset SYSLIB and is used by the initialisation routines. The strings pointer will be reset to the end of the program and the stack will be cleared.	03	Copy the contents of AC2 into pointer UP1.
01	Place the contents of accumulator AC2 onto the system runtime stack. Contents of AC2 are preserved.	04	Copy the contents of AC2 into pointer UP2.
02	Remove the topmost runtime stack member	05	Copy the contents of string descriptor SD2 onto the top of the runtime stack.
		06	Remove the topmost runtime stack member and place it in SD1.
			Functions 07 to 12 assume that the two string descriptors, SD1 and SD2 contain pointers to two strings. Results from these functions are returned in accumulator AC2 where TRUE is a value of 1 and FALSE is a value of 0.
		07	Compare the two strings and return TRUE if they are exactly equal.
		08	Compare the two strings and return TRUE if they are NOT equal.
		09	Compare the two string and return TRUE if SD1 = SD2.
		10	Compare the two strings and return TRUE if SD1 = SD2.

11 Compare the strings and return TRUE if SD1 < SD2.

12 Compare the strings and return TRUE if SD1 > SD2.

13 Concatenate (join) string SD2 to string SD1 returning the combined descriptor for the new string in SD2.

Functions 14 and 15 assume that the I/O channel has been opened previously by function 37 (open).

14 Select the channel number in AC2 for input.

15 Select the channel number in AC2 for write.

16 Convert the number in AC2 to an ASCII-numeric literal and output to the current (output) channel.

17 Write the string currently described by SD2 to the current (output) channel.

18 Write a carriage return (ASCII 13) to the current output channel.

19 Applies to screen output. Move the cursor to the next screen tab position; tabs set at positions 8,16,24 and 32.

Functions 20 to 22 calculate and check array addressing requests.

20 TT1 should contain the start address of the array. The first two bytes at this address contain the maximum number of elements. This function checks that the program is trying to address a valid element by comparing these bytes to the contents of the array pointer APT. An error will result if the element being addressed is invalid.

21 Calculate the address of the element in an integer array. Element number is in APT.

Functions 22 to 28 perform operations on arrays. You must use functions 20 followed by 21 or 22 to calculate the address of the array element to be used by these functions.

22 Calculate the address of the element in a string array. Element number is in APT.

23 Load AC2 with the value of the integer array element at the address calculated by function 21.

24 Save AC2 to the integer array element whose address was calculated by function 21.

25 Load SD2 with the descriptor from the string array element whose address was calculated by function 22.

26 Save SD2 to string array element whose address was calculated by function 22.

27 Increment the integer array element.

28 Decrement the integer array element.

29 Remove the topmost stack element and place it in the array pointer APT.

30 Copy the contents of AC2 to APT.

31 Read a literal numeric string from the current input channel and convert it into a value in AC2.

32 Read a string literal from the current input channel and place descriptor in SD2.

33 BSET. Move the contents of UPI to the memory address contained in AC1.

34 WSET. Similar to 33.

35 Check if AC2 contains a FALSE value of zero.

36 CHAROUT. Output the ASCII character whose code is in AC2.

37 FOPEN. Opens an I/O channel. Either of functions 39 or 40 must be called first!

38 FCLOSE. Close channel AC2.

Functions 39 and 40 set up parameters for function 37, the open statement, and expect the filename string in SD2 and the channel number in UPI.

39 INPUT. Define a channel for input.

40 OUTPUT. Define a channel for output.

41 CLS. Clear the screen and home the cursor.

42 WAIT. Uses the value in AC2 to cause a delay calculated by $60 \times AC2$.

43 HALT. Forces a terminate sequence. Similar to function call 78.

44 SYSCALL. Call a machine code routine at address in AC2.

Functions 45 to 58 perform operations between AC1 and AC2, returning the result in AC2. The exception is function 48 which uses only AC2. Functions 49 to 54 compare AC1 and AC2 and return a TRUE (1) value in AC2 if the condition is satisfied.

45 OR. Perform AC1 OR AC2-AC2.

46 XOR. Perform AC1 XOR AC2-AC2.

47 AND. Perform AC1 AND AC2-AC2.

48 NOT. Perform NOT (AC2)-AC2.

49 Test for AC1 = AC2.

50 Test for AC1 < AC2.

51 Test for AC1 <= AC2.

52 Test for AC1 >= AC2.

53 Test for AC1 < AC2.

54 Test for AC1 > AC2.

55 Plus (+). Perform AC1 + AC2-AC2

56 Subtract (-). Perform AC1 - AC2-AC2.

57 Multiply (*). Perform AC1 * AC2-AC2.

58 Divide (/). Perform AC1 / AC2-AC2.

59 Autoincrement (++).

NOT IMPLEMENTED.

60 Autodecrement (--).

NOT IMPLEMENTED.

61 BYTE. Get the contents of the memory location (AC2) into AC2 (single byte only).

62 WORD. Similar to 61 but gets a word.

63 LEN. The length of the string whose descriptor

	is in SD2 is returned in AC2.		/STOP or CONTROL has been pressed.		the values of the A,X,Y and flags registers to be passed to the routine. Upon return, string (SD2) contains the return values of these registers.
64	CHAR. The ASCII character code in AC2 is converted to a string in SD2.	69	CHARIN. The current input device is polled for a character which is returned in AC2.		
65	STR. The literal of the value in AC2 is converted to a string in SD2.	70	LEFT. Places in SD2 the substring of the leftmost (UP1) characters of string (SD2).	74	IOSTAT. Return the value of the I/O status byte in AC2.
66	ASCII. The ASCII code of the first character of the string in SD2 is placed in AC2.	71	RIGHT. Places in SD2 the substring of the rightmost (UP1) characters of string (SD2).	75	DSTAT. Return the disk drive error code in AC2.
67	STOP. A TRUE value is returned in AC2 if the RUN/STOP key has been pressed.	72	MID. Places in SD2 the substring of (SD2) of length (UP1) starting at (UP2).	76	DERR. Return the disk status string in SD2.
68	KEY. A TRUE value is returned in AC2 if a key other than SHIFT, COMMODORE, RUN	73	SYSFN. Calls a machine code routine at address in AC2. The string (SD2) contains	77	Clear all I/O channels but do not close them.
				78	Terminate. Calling this function terminates the current program. There is no return from this function!

Fig 3 SYSLIB error messages

SYSLIB warnings

Numeric overflow

A calculation has exceeded the integer limit of 65535 and may not contain a valid value.

Numeric underflow

A calculation has gone 'negative'; i.e. has effectively gone less than zero. In fact the value will be 2's complement.

WARNING *Disk not present. Subsequent I/O attempts will cause errors*

May be printed during the init phase. Indicates that a disk drive is not present.

SYSLIB errors — non I/O

Bad array subscript

An array has been illegally addressed.

Illegal quantity

Some value (possibly during a read) has exceeded the valid limits.

String too long

Strings must not exceed 255 characters.

Data type mismatch

May occur during a read. Indicates that incorrect data has been assigned

to a particular variable.

System I/O error

General I/O error. More detailed messages follow later.

Reserved I/O channel

Certain channel numbers are reserved by the system. This messages is printed when you try to use one of them (See the FCL Programmers' Manual for a list of invalid channels).

Device not found

Disk drive is not present.

Null FID

A filename was null.

Out of memory

There is no more room for strings.

Division by zero

You cannot divide by zero!

Stack overflow

Unlikely, but occurs if the runtime stack fills up. This may indicate an error in COMPILE.

SYSLIB I/O errors

These I/O errors are more specific and are actually used to report Kernal I/O errors (See Commodore 64 Programmers' Reference Guide for details of Kernal routines).

STOPed

An I/O operation was terminated by the RUNSTOP key being pressed

Too many open files

The system cannot maintain more than about 6 concurrently open files

File already open

You have used the same channel as a previous (still open) I/O

File not open

A channel you have used has not been opened

File not found

The system cannot find the file you have requested for INPUT

Device not present

The device asked for was not available

File is not an INPUT file

You have tried to read from an OUTPUT file

File is not an OUTPUT file

You have tried to write to an INPUT file

File name is missing

You cannot open a disk file with no name

Illegal device number

The device number specified is not legal. May indicate a problem with SYSLIB itself.

NEW FROM TRILOGIC

BACK-UP AND TRANSFER PROGRAMS
FROM DISK TO TAPE TAPE TO DISK
DISK TO DISK TAPE TO TAPE

LAUNCH AHEAD!

WITH THE NEW
'ROCKET POWERED'

Including V3.2R Software

Expert CARTRIDGE

COMPLETE BACK-UP SYSTEM
MAIN FUNCTIONS

- Freezes all Programs.
- Creates a back-up onto Disk or Tape. Regardless of whether the original was loaded from Disk or Tape.
- Independent tests show the Expert to have the most effective compactor so you can save more games per Disk and have faster reloading.
- Saves a back-up in one file.
- Expert is not needed for reloading a back-up.
- Programs reload in less than 10 seconds using New Rocket Loader.

ROCKET — A SUPER-FAST
DISK TURBO LOADER

UTILITY FUNCTIONS

- Sprite Saver & Editor with 'Animator'.
- Infinite Lives Command.
- Joystick Autofire mode — even better than Autofire Joysticks.
- Joystick Port Swap — Your back-ups can use the same port.
- Powerful & Professional 64k M/Code Monitor.
- Printout Hires & Lores Screens.
- Expert Express — Use the Expert as a Disk Turbo Loader.

- Loads independently of the Cartridge.
- Reload on average back-up in 6 seconds.
- Loads any size of file. One file format.

COMPUTER PROBLEMS?

64 DOCTOR

A professional diagnostic
CARTRIDGE for your C64.

TESTS:

- Keyboard
- Joystick Port
- Serial Port
- User Port
- Cartridge Port
- Basic Rom
- Kernal Rom
- CIA Chips
- Video Chip & Video Banks
- Sound Chip
- NMI & IRQ Interrupts
- Cassette Key Press
- Cassette Data
- Even tests your Joystick.

£18.99

CALL A DOCTOR!

COMPRISES, 64 DOCTOR CARTRIDGE,
USER & SERIAL PORT TESTERS, AND —
FREE — The only comprehensive
fault diagnosis and Repair Guide available.

- Explains step by step, how to locate faults and identify chips.
- How to dismantle the keyboard.
- Includes Commodore part number guide.
- Full of tips and hints many known only to the trade.
- How to desolder chips the professional way.
- Written by professionals with a vast knowledge of 64 faults and repairs.

LOADING PROBLEMS?

DATASETTE DOCTOR

THE ONLY COMPLETE DATASETTE
SERVICE & ALIGNMENT KIT.

- Check and adjust alignment. Two tests with very precise adjustment.
- Check Datasette Circuitry. Shows up electronic faults.
- Check for Electrical Interference. Shows up noise from TV's & main wiring.
- Check Saving Performance. Special high Baud rate saving test.
- Check Loading Performance. Special Turbo loading test.
- Clean & Demagnetise Tape Head. Cleaner/Demagnetiser supplied.

£8.99

DRIVE DOCTOR

With this complete kit
you can check:

- HEAD ALIGNMENT — Unique test makes accurate setting easy.
- HEAD MOVEMENT — Shows up wear and friction.
- BACK-STOP SETTING — Critical but easy to adjust.
- MOTOR SPEED — Show speed errors.
- ALSO shows up free play & faulty Simotor.

COMES COMPLETE WITH
PROGRAMME TAPE,
SPECIAL ALIGNMENT DISK
AND FULL INSTRUCTIONS.

£14.99

From the Designer of 'The Double' comes...

TRACK SUIT MANAGER

The first ever football game with real match tactics.

REVIEWS SAY

Commodore User says... The match is the best I've ever seen... T.S.M. is the most playable game of its genre... One of the most frustrating, fun, compelling, exciting and addictive games I've ever played. **8/10**

C & V Games says... The best ever football managerial game ever, in the history of the world, no messing, straight up... A very impressive start for Goliath. **9/10**

Zzap says... Presentation **96%** Lastability **88%**
Hookability **93%** Overall **89%**
Easily the best of its type

Your Sinclair says... I'm amazed at this one... Some day all footie games will be made this way... If you don't like T.S.M. your dead from the neck up. **8/10**

Sinclair User says... The best ever managerial game, the one your speccy has been waiting for. **93%**

Your Commodore says... T.S.M. is one of the best games I've ever played and certainly highlights the problems of a national team manager.

WE SAY

Sophisticated Match Play with... Adjustable Team Formations * Free Kicks * Throw In's * Offside's * Individual Player Abilities * Goal Kicks * Corners * Penalties * Tackles * Fouls * Select Player for 'Set Pieces' * Injuries * Booking's * Sending Off's * Suspensions * Substitutes * Heading * Genuine Penalty Shoot Out in Quarter, Semi & Final Matches * Extra Time *

Individual Player & Team (Defence, Midfield, Attack) tactics... Defensive * Attacking * Normal * Quick Counter Attacks * Zonal Marking *

GOLIATH GAMES is a 'NEW' Software House specialising in... ADVANCED... INVOLVED... ORIGINAL SOFTWARE.

The Vindicator

Guess who has got to save the world again? Invaders from a distant star have smashed the Earth to bits. As the sole survivors, you and a few like-minded individuals have pledged to uphold the laws of justice, revenge and other clichés. One man has to face the final challenge and become the Vindicator. Have you noticed how it is always one man. What's happened to the rest of the survivors? Perhaps they are not so keen on upholding the laws of justice, revenge and other clichés as they claim to be – but I digress.

A quote from the packaging blurb gives you some insight into the enormity of the task facing you. 'Across a tortured landscape, against incredible odds, he must battle through to the enemy stronghold, down into a maze-like corridor filled with mutated guardians until he reaches the inner sanctum of the dark overlord to strike the final blow of retribution...' It's beginning to sound as if you drew the short straw.

The task comes in three sections. In part one, you have to blow up the Alien Vanguard and their base. This complex is set out as a four-level maze in which you must find the computer rooms. These, in turn, will give details to the whereabouts of the bomb parts necessary for the destruction of the base.

Before you can access the computers though, you must first kill off vast numbers of aliens that patrol the rooms off the corridors. Green ones are easy to kill – you can just duck out of the way of their bullets – but the red ones are much harder to despatch and you will need bigger and better weapon cartridges if you are not to sustain considerable damage yourself.

Having killed the alien, you can then pick up his lift pass, computer access card or an extra cartridge. Other items to be acquired include oxy-gum – a health restorer used to repair damage either from being shot or simply from inhaling the poisonous atmosphere.

Once you have found a computer terminal and accessed it with the correct card, you then have to solve an anagram before you are given the information you desire. The solutions to these are not immediately obvious but a reference to some of the names connected with the design of the game may put you on the right track. Losing one of your lives also results in the loss of any cards you are carrying at the time.

Having blown up the base, you now have to fly a commandeered fighter plane across enemy terrain blowing up as many of the installations as possible. The problem is that there is nowhere to land so you must return to the start and then make the journey again, this time in your jeep. Hordes of tanks and helicopters are out to get you but that shouldn't prove too difficult for a budding superhero. Once you reach the other end, all that remains is for you to defeat the Mutoid Guardian before gaining access to the final part of the game.

The Catacombs lead you to the bowels of Hell itself. Apart from avoiding the hordes of evil minions, it is purely a case of keeping on going until you come to the final confrontation with Gog – the personification of evil and the ultimate objective of your quest.

Here is your chance to live up to the title of the game and become THE VINDICATOR.

The game looks good and plays very well. The controls are easy to get to grips with, unlike some other games of this type. The only real problem you are going to encounter is that of orientating yourself properly in the corridors. The easiest way round that is to make a note of the co-ordinates of all the key installations – these are constantly updated as you wander around the mazes.

If I have one major grumble, it is that you cannot store supplies of oxy-gum in a pocket (surely even superheroes have pockets) but have to leave it where it is until required. That apart though, The Vindicator is an excellent challenge and anyone enjoying this type of game will surely want it in his or her collection.

Touchline:

Title: The Vindicator. **Supplier:** Imagine Software, 6 Central Street, Manchester M2 5NS. **Tel:** 061-832 6633. **Price:** £8.95 (cass), £14.95 (disk).

**Champagne Suite &
Exhibition Centre
Novotel, Hammersmith, W6**

And you just mustn't miss the wonderful world of Amiga – where you'll be able to see for yourself the ultimate in personal computing.

No matter which Commodore machine you use – from the C64 up – you'll find just what you are looking for.

All the leading companies servicing each sector of the Commodore market will be on hand to demonstrate their latest developments.

Traditionally the liveliest Commodore event of the year, this pre-Christmas show is one you can't afford to miss.

How to get there

By Underground: Nearest tube station is Hammersmith (Piccadilly, Metropolitan & District Lines).

By Bus: 266, 714, 716, 290, 30, 72, 73, 74.

Car parking facilities available at the Novotel.

DATABASE EXHIBITIONS

Not the Palace hit, but a conversion which is already a 16-bit cult.

When it first appeared on the Amiga and Atari ST, Psygnosis' *Barbarian* immediately gained cult status and I suppose it was only natural that it would be converted to eight bit formats. The conversion has now appeared on the Melbourne House label and I am sorry to say that they have made something of a botch of it.

The storyline is convoluted to say the least, running to some twenty pages in the instruction booklet. What

Barbarian

follows is a (very) potted history. You are Hegor the Barbarian. When you were young, your father, Thoron, trained you in the use of various weapons. One day, you return home to see him being beaten to a pulp by a dragon which he had just lured away from the village thereby gaining, but posthumous, hero status. You immediately vow your revenge.

To while away a few years, you go off practising all the usual barbarian-type habits such as drinking and wenching a lot while killing the odd monster. During these travels, you discover that your father's enemy, the controller of the dragon, was in fact your Uncle Necron, your father's twin brother. Your father had killed Necron once but, because of the family ties, let his soul regenerate.

Necron is now terrorising the world again and there is a prize of a kingdom to anyone who can defeat him and his dragon Vulcuran. This seems to interest you rather more than your previous vow of vengeance but the ghost of your father appears and reminds you of your duty. Confused? Don't worry, it's all incidental to the game.

Hegor is controlled via a series of icons although the instructions cunningly don't bother to tell you what they are for. At least not in English they don't! They do in French, German and Italian although one of the French commands is also missing. This is obviously a plot by Mastertronic/Melbourne House to get everyone learning a foreign language.

For non linguists, the available commands include left/right, up/down, jump, stop, run away, attack, defend, pick up, drop and use. A cursor is moved over the appropriate choice and the fire button is pressed to execute an action. Being used to the Amiga version using the mouse, I found the joystick response to be very slow and got killed several times through being unable to execute combination moves quickly enough.

The game involves traversing a number of screens by killing off monsters or by trying to leap over falling masonry, collapsing bridges and the like. Amongst the monsters to be encountered are tin men, strange rhinos and woolly bears. You start off armed only with a sword but must find and pick up other weapons en route, such as a bow and arrow which is required to dispose of the dragon. Eventually, you will find the crystal that represents Necron's soul and you must drop this in the volcano. You then have only a limited amount of time to make your escape before the volcano erupts.

The traps appear one at a time at first but soon they are found acting in combination with monsters. One trap I didn't like involved a falling slab of spiked stonework which could be avoided by standing underneath it and jumping upwards!

Although comparisons between eight and sixteen bit versions are difficult, the graphics and sound effects on the C64 version are poor, especially the graphics which look very fuzzy. Even the stunning Amiga title screens, which could have been reasonably reproduced, have been replaced with *Invade-a-load*.

It is the gameplay that has suffered most. The monsters have lost all their aggression and there is a general woolliness about the controls. Coupled with the very shoddy instruction booklet, this all makes for a very disappointing product.

The Amiga version was on the office machine all the time. Everybody wanting to have just one more go. On the C64, I found no addictive qualities whatsoever and couldn't wait to turn the machine off.

GRH

Touchline:

Title: *Barbarian*. **Supplier:** Melbourne House, 2-4 Vernon Yd, Portobello Rd., London W11 2DX. **Tel:** 01-727 8070. **Machine:** C64. **Price:** £9.99 (cass) £14.99 (disk).

YOUR COMMODORE

READERSHIP SURVEY

25 Free subscriptions must be won!

If you would like to receive a copy of your favourite magazine FREE for 6 months, simply complete this questionnaire and return by 11th November 1988 and you could be one of the lucky 25 people to win a 6 month subscription to YOUR COMMODORE.

Some of the questions are of a more personal nature and do not directly relate to the magazine. Answers to these questions help us present an overall profile of our readers and their lifestyles to advertisers who require such data for selecting suitable magazines for their products.

No names and addresses will be supplied to third parties and all details will be treated in the strictest confidence by the publisher.

We would like to thank you in advance for your time, and remind you that only fully completed questionnaires received by 11th November 1988 will be eligible for the FREE draw.

1. How long do you keep your copies of YOUR COMMODORE for:

- Less than one month ☐
One month ☐
Three months ☐
Six months ☐
A year or more ☐

2. If kept, how often do you refer back to issues of YOUR COMMODORE?

- Once a week or more ☐
About once a month ☐
Once every three months ☐
Less often ☐
Never ☐

3. How long do you spend reading your copy of YOUR COMMODORE?

- Over 2 hours ☐
1½ - 2 hours ☐
1 - 1½ hours ☐
½ - 1 hour ☐
Less than ½ hour ☐

4. How long have you been a YOUR COMMODORE reader?

- Less than 3 months ☐
3 - 6 months ☐
7 - 12 months ☐
1 - 2 years ☐
2 - 4 years ☐

5. How often do you buy YOUR COMMODORE?

- Occasional issues ☐
Most issues ☐
Every issue ☐

6. How much of YOUR COMMODORE do you read?

- Read only some articles ☐
Read most articles ☐
Read all articles ☐

7. With regard to the advertisements in YOUR COMMODORE do you?

- Read or look through most or nearly all the ads ☐
Read or look through some of the ads ☐
Just read or look through the occasional ad ☐
Very rarely/never look at the ads ☐

8. Which of the following would you most like to see featured with the magazine (please tick one box only)?

- Cover mounted gifts ☐
Additional supplements ☐
Competitions ☐
Money saving offers ☐

9. Does anyone else read your copy of YOUR COMMODORE?

- No, only myself ☐
One or two other people ☐
Three or four other people ☐
More than four other people ☐

10. If your copy of YOUR COMMODORE is read by other people, please give details of their age and sex:

	PERSON 1	PERSON 2	PERSON 3	PERSON 4
AGE: 9-14 YRS	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

A LOT OF STYLE FOR A LOT LESS FROM ARGUS AND GRATTAN

*Argus Specialist
Publications and Grattan
have got together to bring
you two superbly stylish
offers at prices which you
won't beat anywhere.
Order today
and discover
just how little
it costs to have
style.*

Casual Jackets

£32.99 EACH

More than just good-looking, these colourful padded jackets are also very practical.

Both are made from easy-care polyester/cotton fabric and come in a choice of colourways.

Look at the jackets then look at the price and you'll realise that this is one garment you can't afford to be without.

1 Padded jacket with draw string hood, collar and two flap pockets. Front zip and stud fastening. Polyester 65%, cotton 35%. Available in Blue/Navy and Jade/Black. Chest sizes: 34/36, 38/40, 42/44 ins.

2 Padded jacket with concealed hood, zip fastening and two slant side pockets. Polyester 65%, cotton 35%. Available in Grey/Black/Burgundy and Grey/Black/Yellow. Chest sizes: 34/36, 38/40, 42/44 ins.

MOON Phase Watches

£49.99 EACH RECOMMENDED PRICE £99.99

All watches tell the time. Many give the date. But here's one which also tells the phase of the moon.

The Zeon Lunar Moon Phase Watch has a precision quartz movement, three hands, a date display PLUS a fascinating moving skyscape which corresponds to the sky and phase of the moon on any particular night.

These beautiful looking and intriguing watches are water resistant to 100 feet and come in ladies' and gents' styles, complete with a Burgundy leather strap.

The recommended price is £99.99 but we're offering them for an incredible £49.99 each so you can save £50.

Now that's real style.

Talking Computers

How to program a mini Max Headroom into your favourite program

It's all very well being able to hear your prose spoken by a disembodied voice through a voice synthesiser. How much better it would be to see who the voice belonged to.

Creating a simple face on the screen is easy; getting it to talk is a touch more difficult. Even the creators of the television presenter, Max Headroom, had to rely on an actor made-up to look as though he was computer generated and enhanced by a few clever TV tricks. Armed only with some speech software, the odd sprite and a C64, I considered the possibilities of creating a talking head!

It seemed like a good idea because a talking head in an adventure would allow the users to not only see the guide but it would also tell them what was going on; a game show host could read out the questions and answers; cartoon characters designed by you, working in your own programs could be seen and heard to speak just like Fred Flintstone or Yogi Bear. Imagine your own program being introduced by a talking head explaining how to use the program...it's easy to get carried away by the possibilities but what about the practical problems?

The key to your character being seen to talk is lipsync. Lipsync means that the speaker's lips move precisely at the same time as each syllable is spoken. If the timing of these two events is not perfect then the results will look very strange. A character in the distance can be seen simply to open and close its mouth but at closer quarters this technique looks rather bad. It can be disguised by large movements of the head as in the TV program 'Spitting Image' and with ventriloquists' dolls, but those who remember the TV series, 'Thunderbirds', will recall how unconvincing the

puppet's speech was because of too limited lipsync and simplistic mouth movement.

Cartoon animators recognised this problem as soon as they started adding speech to their characters and devised a number of lip movements for saying different letters. For example, the letters B and P are spoken with the lips closed and then immediately opened as they are pronounced. Similarly, the letter O requires the lips to form a different shape and so on. The problem's not getting easier is it! Fortunately such lip movements can be reduced to just a few key 'frames' to produce a reasonably convincing result.

Blinking nuisance

To add to the realism, as the lips of your character move, you should also be able to see other facial movements. The eyelids blinking or the eyes moving from side to side add realism but also create more problems.

Sprites are the ideal solution for displaying both lip and eye movement. In creating the lip movements, it's possible to use just five mouth shapes to provide an acceptable result. This may not be adequate for lip-readers but it does give a convincing display. To narrow down the range of movements, I have taken groups of letters that use similar lip movements and grouped them together. The letters U, Y, W use basically the same mouth shapes but F and V share their own particular mouth shape. When the character is speaking the movements will have to blend with each other in a fairly natural way.

To achieve a convincing blink, it's important to realise that a blink is

performed unconsciously and at random. The program can't rely on a set delay and must therefore look to some other form of control to give a realistic result. I could have chosen to use the random number generator in the computer but it seemed a neater idea to control the blink through the string of characters to be spoken. Taking advantage of the random occurrence of the letters within a sentence, I selected the letter 'O' to cue the blink. So every time the program reads an 'O' the character will blink.

The Lipsync program that accompanies this article works by reading a string and, by scanning each character in turn, instructs a pre-defined sprite to be printed accordingly.

Controlling the delay is critical to lipsync but the speech synthesiser transfers a string to its own buffer and speaks as it reads each character from this buffer. The actual speech slows down the emptying of the buffer to its own slower speed as it calculates which sound goes with which character and this also makes it sound more realistic. If it didn't do this, the buffer would empty in a fraction of a second.

Because of this inbuilt sluggishness, the interrupt-driven speech software frees the computer to get on with another task, in this case reading the string for the Lipsync program. At this point I should mention that the speech buffer should always be filled just prior to the SYS call for the Lipsync routine.

The Talking Head listing is sprite data made up with four individual sprites to produce a talking head for use with Lipsync. Run the Talking Head Demo to see it in operation.

Only the first four sprite pointers are used for the head leaving the other

sprites for you to use for the body or whatever else may be required. The talking head could be used in various applications including games. The beauty of only using sprites for the head is that any text printed on the screen can scroll up without affecting the positioning of the head. Feel free to redesign the head with a sprite editor but be careful not to alter the mouth shapes too much because they must relate to the characters read from the strings.

The final program Monster Talks, is a complete program controlled from Basic. Persons of a nervous disposition should not copy this listing.

Getting it all in

Type in the BASIC loader in the normal manner. When the checksum adds up correctly, it will save it self as LIPSYNC MC, so make sure you're prepared.

Lipsync is called by SYS49333, SPRITE LOC, TIME DELAY, STRING.

SPRITE LOC is the first byte of the current sprite location. This permits you to store your talking head sprites in any location which is more

convenient for your own programs. The TIME DELAY controls the lipsync timing. The STRING is where the Lipsync program finds which string to read. This can either be a string of characters in quotes or a string variable. The Lipsync Demo should be a guide and you can adapt it to your own needs in the future.

Talking Head

The loader program consists of sprite data and again will save automatically if the data has been typed incorrectly. Talking Head is for use with Lipsync only and should not be used in conjunction with the next program. Make sure that you have the Lipsync programs following on in the correct order if you're using tape, or that they are on the same disk if you're not. Sprites parameters such as positioning, size, etc. are controlled from Basic. (See Lipsync Demo.) The talking head sprites are located in memory at \$3C80 (15488).

Monster Talks

Type and save Monster Talks Ldr. Before you run it, reset the computer and type in the following in direct

mode (if you don't do this the Basic loader will corrupt itself).
POKE43,0:POKE44,32:POKE
40959,0:NEW

As with the other programs, it's best to study the demo and experiment for yourself. The program Monster Talks resides at the start of Basic so as to avoid any memory conflicts with any of the speech software.

Once saved as a working program, the program should be run before using, or writing, a Basic program. The reason being that it raises the start of Basic to protect itself from being over written.

Controlling Monster Talks

When you have loaded Monster Talks, run it before loading the demos or entering your own programs. SYS 3650 will initialise and print the Monster onto the screen.

SYS 3650+3, TIME DELAY, STRING.

Will co-ordinate the lipsync after any call to your voice synthesiser.

SYS 3650+6 will return you to Basic.

WIN WITH COURSEMASTER THE COMPUTER HORSERACING PROGRAMME

- ★ RATES ANY RACE IN SECONDS - ANY DAILY NEWSPAPER IS ALL YOU NEED
- ★ NEVER out of date - Both N. Hunt and Flat - Fast data entry
- ★ AMAZING ACCURACY!! - Now you CAN BEAT THE BOOKIE!!
- ★ Works on the simple principle that FAST HORSES BEAT SLOW ONES!!!!
- ★ Clearly identifies best selection in every race plus these AMAZING Features:-
- ★ First, Second and Third choice shown for forecasts and Tricasts etc. Recommends most suitable type of bet.
- ★ Actually works out your WINNINGS on most popular bets including SINGLES and DOUBLES, win and each way, PATENTS, YANKEES, CANADIANS, HEINZ etc. Good EACH WAY and LONG ODDS bets clearly shown
- ★ Will PRINT out your BETTING SLIP for you
- ★ Maintains a BANK ACCOUNT - BET Like PROFESSIONALS Do! Records all your bets in any number of accounts. Keeps a complete record of your betting or compare COURSEMASTER against your favourite tipster.
- ★ PLUS!! - THE AMAZING COURSEMASTER SYSTEM. This superb betting system is included in the programme. A system which regularly produces huge wins from small stakes. try it! Can pay for itself many times over on the first day!
- ★ Supplied with 20 page BETTING GUIDE and MANUAL.

FREE HOT TIP OF THE MONTH TO EVERY PURCHASER

All for £14.95 inc Post & packing (Disc Users please add £2.00 for disc)
Available now for all Spectrums (inc +3 disc version), Commodore 64/128 Sinclair QL, (add £1 for mdrive), Amstrad CPC, All PCW's, BBC and Electron, IBM/PC compatibles. Please state which.

£ PROFIT FROM YOUR MICRO

- ★ WHATEVER your MICRO is you can use it to make a good income! Even if you only have a couple of hours spare each week!
 - ★ We have put together a package of easy, sensible and practical business ideas which can easily be used by anyone with any micro No computer expertise required!!
 - ★ Earn ££'s from home doing what you enjoy doing - using your COMPUTER! It doesn't matter which model.
 - ★ You probably already have all you need to start earning.
 - ★ THOUSANDS of potential customers in your area who will GLADLY for your services. We will show you how to find them!
- Full step by step guide to EARNING MONEY FROM YOUR MICRO.
FREE BUSINESS IDEAS CASSETTE TAPE WITH EVERY COPY

It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print, on posters or in the cinema.

Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and warrant your complaints.

If you're not sure about which ones they are, however, drop us a line and we'll send you an abridged copy of the Advertising Code.

Then, if an advertisement bothers you, you'll be justified in bothering us.

The Advertising Standards Authority.
If an advertisement is wrong, we're here to put it right.

ASA Ltd, Dept 2 Brook House, Torrington Place, London WC1E 7HN

This space is donated in the interests of high standards of advertising.

Your orders are to report to the top secret flight facility known as Echelon and be trained to operate the Lockheed C-104 Tomahawk which is the most awesome combat and exploration craft in the 21st Century. So begins this 3D spaceflight simulator, from the authors of Leaderboard.

This task shouldn't be any problem to someone who's mastered the controls of a 20th Century craft such as a Gunship helicopter or a civil or military aircraft because you have standard controls over the craft's pitch and roll, thrust and attitude. In fact the game comes with a Gunship-style keyboard overlay to help you find the right keys without delving continually into the extensive 72 page instruction manual.

Squeezed inside the presentation box is a lipstick, which sets Echelon apart from other combat flight simulators. No, it's not the latest shade from Max Factor but a voice-activated, headset microphone (lipstick) which you use to fire your weapon systems. It's important to realise that it's only voice-activated and does not employ voice recognition, it simply waits for some noise to activate it. In other words saying FIRE will launch a missile, as will LAUNCH, WOMBAT, or a whistle or cough. The headphones supplied with the Lipstick don't actually work but *do* create an interesting atmosphere.

With your headset on and your joystick primed you're ready for action. After a brief security check to make sure the Lipstick and joystick are in the correct joystick ports, the main game loads and you are launched into the massive vector graphics landscape. A grid that corresponds to your map references is superimposed on the ground to help you navigate around the various sectors as you carry out one of three missions.

In scientific mode, your job is to explore the planet, collect and identify curious objects and solve a series of mysteries to unearth what exactly is going on in this sector and what, if anything, is the significance of the pirate maps. I'm not giving anything else away about this mission as it's the main one in the game but it will suit those gamers who prefer a logical approach which engages their minds more than their lasers.

Patrol mode adds some action for itchy fingered combat pilots while

Echelon

they're exploring the unknown and Military mode is all-combat for those who want to try out their missiles, lasers and photon cannons. These are selected by pressing the function keys and then fired using the Lipstick.

As a combat game, Echelon quickly reached a limit where hurling missiles at only one type of alien became tiresome and so I decided to concentrate on the scientific mission and began exploring the unknown. In this mode you can hover and land or even launch the RPV and remote vehicle from which you can watch the

Tomahawk itself to get a different angle on the action.

The game now comes into its own as you find a massive playing area to explore which includes buildings, satellites and towers, some of which hold the keys that could unlock the mystery of the private maps.

T.H.

Software for Sale

If you think that one of our programs looks very interesting, but you can't afford the time to type it in then our software service will help you out

It's three o'clock in the morning. You sit at the computer keyboard having just finished a marathon typing session entering one of the superb programs from *Your Commodore*. Your fingers reach for the keyboard and press the letters R, U and N. You press RETURN, sit back and nothing happens.

Everyone has probably faced this problem. When it does happen it's a matter of spending hours searching through the program for any typing mistakes. No matter how long you look or how many people help you, you can usually guarantee that at least one little bug slips through unnoticed.

The *Your Commodore* Software Service makes available all of the programs from each issue on both cassette and disk at a price of £6.00 for disk and £4.00 for cassette. None of the documentation for the programs is supplied with the software since it is all available in the relevant magazine. Should you not have the magazine then back issues are available from the following address:

INFONET LTD, 5 River Park Estate, Berkhamsted, Herts HP4 1HL.
Tel: (04427) 76661

Please contact this address for prices and availability.

The Disk

Programs on the disk will also be supplied as totally working versions, i.e. when possible we will not use Basic Loaders thus making use of the programs much easier. Unfortunately at the moment we cannot duplicate C16 and Plus/4 cassettes. However programs for these machines will be available on the disk.

What programs are available?

At the top of each article you will find a strap containing the article type, C64 Program etc. So that you can see which programs are available on which format, you will also find a couple of symbols after this strap. The symbols have the following meaning:

This symbol means that the program is available on cassette.

These programs are available on disk.

Please Note

Since the programs supplied on cassette are total working versions of the program, we do not put disk-only programs on tape. There is no sense in placing a program that expects to be reading from disk on to tape.

JUNE '88

DIRECTORY EDITOR — A superb utility that allows you to alter your disk directories as well as add comments (C64 disk only).

30K RAM DISK — Turn unused memory on your C64 into a pseudo disk.

BASIC LISTER — List a Basic program stored on disk without having to load it into memory (disk only).

EASY BASIC TOOLKIT — Give your C64 over 30 new basics — including the ability to store libraries of subroutines.

DISK SECTOR EDITOR — Examine the contents of your Commodore 1541 disks (disk only).

ORDER CODE

DISK YDJUN 88 £6.00

TAPE YCJUN88 £4.00

JULY '88

EASIPRINT — Now C16 and Plus/4 owners can access their printer functions with a set of 60 easy to use Basic commands (available on disk only).

HANDY INPUT ROUTINES — Make your Basic programs idiot-proof and more attractive with these two Basic input routines (C64).

MAKING MUSIC — A simple C64 synthesiser to accompany our popular series.

DIY PARALLEL INTERFACE — Use this software and a lead of your own manufacture to drive a Centronics printer (C64).

CP/M CENTRONICS INTERFACE — Give your 128 in CP/M mode access to a Centronics printer..

CASSETTE INLAY PRINTER — Use your printer to produce neat inlays for your cassette collection (C64).

DISKASSEMBLER — Dissassemble your programs direct from disk with this program for the C64 (Disk Only).

ORDER CODE

DISK YDJUL88 £6.00

TAPE YCJUL88 £4.00

AUGUST '88

MAKING MUSIC — Programs to accompany August's installment of our super music series (C64).

SHORT INTERLUDE — Overcome the problems of handling more than one interrupt with this handy routine for machine code programmers (64).

TAPE ORGANISER — A high speed program filing system for cassette users. (C64).

SPILT BAUD RATE TERMINAL — Drive an RS232 modem with this TTY software for C64 or C128.

SPRITE LIBRARY — Aeroplanes are the subject of this installment (C64).

EDUCATING SYDNEY — Create an image of the SID chip in memory so that you can see what it's up to whenever you require (C64).

SIMPLE — Give your Plus/4 the facility to use Icons and pull down menus. Available on disk only.

ORDER CODE

DISK YDAUG88 £6.00

TAPE YCAUG88 £4.00

SEPTEMBER 1988

MUSIC COMPOSER — Compose your own three part harmonies on your C64 with this superb package — disk only.

MUSICAL FX — An excellent effects generator that allows you to produce sound effects in your own C64 programs.

SAMPLER 64 — The quality may not be suitable for studio use but you can have great fun using this C64 sound sampler.

C16 Disk Monitor — A superb disk utility for C16 and Plus/4 owners (available on disk only)

ORDER CODE

DISK YDSEP88 £6.00

TAPE YCSEP88 £4.00

OCTOBER 1988

SPRITE LIBRARY — In this instalment our sprites take on the look of the alphabet (C64)

SAMPLER 64 — See September 1988 for details (full program on both September and October disks and tapes.)

SET THE ALARM — Use the C64's in-built clock as an alarm.

JACK IN THE BOX — A handy box utility for Basic and machine code programmers (C64).

FILE EXTENSION — Modify your disk directory so that you can load all your programs with ease. (C64 disk only)

HI-RES/MULTI/COLOUR PLOTTER — A selection of plot routines for both Basic and machine code programmers. (C64)

JOYSTICK CURSOR — Let your joystick emulate the cursor keys (C64).

HI-RES FILL — A superb machine code fill routine for all graphics programmers. (C64)

CODE RELOCATION — Change your machine code programs so that they will run in any area of your C64's memory.

ORDER CODE

TAPE YCOCT88 £4.00

DISK YDOCT88 £6.00

Cassettes or disks are available from March 1986. Please ring the editorial office (01-437 0626) for details of these.

Please allow 28 days for delivery.

Letters

Your opinions are what count. So put pen to paper and let us know how you feel about the industry, and of course the magazine!

Iwould like to pass on some criticism of *Your Commodore* magazine. The broad coverage of your magazine serves the interests of many readers known to me. The odd printing error or so is no problem and is usually remedied on the Back Page.

Our complaint would only be the poor presentation of some programmes. A recent example is the C64 Utilities Unlimited series. The February program Turbo Menu Maker was very hard to read and I found several cases where "66" entered produced the same checksum as "55". However, after borrowing the magazines of fellow readers most of the errors were resolved. The program runs but I'm sure it still has an error or two.

The March issue continued the series with three more potentially useful utilities. The second program however, proved impossible to read in certain sections. After borrowing magazines from friends again, buying a second copy from a different newsagent (I tried to get away from my newsagent's obviously bad batch); and then being loaned a copy from my original newsagent the program still remains unfinished. I have even resorted to making blown-up copies of the unreadable parts on a copier and still failed.

Given the high quality of other program formats used in *Your Commodore* e.g. Popper and Spelling Checker along with Joystick Read in the same issue, supporters of *Your Commodore* should be able to enjoy

the same high quality presentation in all program presentations.

On another topic, your review Write On (Nov '86) re: Script/Plus for Plus/4 and C16 owners was glowing in its praise. I subsequently obtained this program and am using it for this letter. It is much more convenient than Easy Script on the C64, however I wonder if English versions have the same problems with two minor bugs in the program acknowledged by Commodore in Australia. One, Save with Replace?, does not work, a new file name has to be used, Two, it is necessary to exit Disk Mode and return again to execute a second disk command.

Thank you for a well-balanced magazine, for all Commodore owners including Plus/4 and C16, forgotten by lesser magazines.

G.K. Polson, Australia.

In the next few months you should be seeing a marked difference in the listings of Your Commodore. We will be starting to print many of our programmes using lower case. This will avoid confusion between certain letters and numbers, for example 8 and B.

The 'poor presentation' that you mention in your letter was due to a grey tint being placed behind the listings. Steps have already been taken to prevent this happening again.

We have already mentioned in the magazine that 'clean' photocopies of the DISKIT series (1-5) are available from this office. If anyone would like a copy then send a large stamped, self-addressed envelope to:
DISKIT PHOTOCOPIES
Your Commodore

*1 Golden Square
London
W1R 3AB*

As for your question about Script Plus, we have not experienced this problem. Maybe some of our readers have?

Calling all knitters

I have been using and following *Your Commodore* for nearly two years, and reading *Your Commodore* for a year and really enjoy the coverage given to all aspects of computing. But I have one moan at the moment, and this is that there is a Sinclair and an Amstrad program for knitting, but there is nothing from Commodore programmers. My wife enjoys knitting and would like to see a program for knitting as I'm sure would the many wives of other male computer maniacs.

Is there any one that has an idea about such a program? Or perhaps one of the programmers from *Your Commodore* can put together a program for knitting.

I can even understand the fact that there is practically no programmes for the C128 (of which I own and am proud of) and it is the same with some utility programmes; there seems to be more for BBC computers and Amstrad, etc, than there is for Commodore? It is not as if the Commodore does not have the capabilities for such programmes, the blame lies with the programmers who keep pumping out games and don't give us the chance to use and

appreciate and enjoy some different utility programmes.

Norman Stone, Chelmsford, Essex.

Knitting and computing don't normally go hand in hand and I'm afraid that I don't know any knitting computer buffs who could produce such a program.

I'm sure that one of our readers somewhere will have, or could, produce such a program. So come on send it in, we may even publish it!

Cutting down the Workload

As a small businessman now getting to grips with computing I would like to express my thanks to you for publishing a magazine that covers the whole field of Commodore computing.

Many of your article/programs have helped me now to make computing profitable and labour saving, by showing me how to write my own detailed programs in Basic that get the desired results in half the time required by a certain well-known make of PC and clones.

Might I hope that in the not too distant future as the 128 becomes more established, we shall see some programmes to make greater use of its ability to read other formats and thereby saving hundreds of poor overworked users the never ending problems of incompatible disks.

Having over the years had a great deal of experience with many makes of so called business computers, I have come to appreciate that instructions to employees can in fact be written directly into a computer in Basic and be carried through, without further help from any human hand. The speed at which the computer works is of little importance if there is not the need for an operator to sit watching it. What is important is be able to communicate with your computer in a way that it understands. Your magazine articles and programmes about Basic help to show how simple it is to communicate and programmes about Basic help to powerful and reliable employee in its own right. It also shows that a businessman can still be the boss and need not be the slave to the computer and its software.

During the past four years I have been able to increase my clientele and profits and have more spare time and I

owe all this to two very important factors. Firstly my good fortune to finally purchase a Commodore computer and secondly to reading *Your Commodore* every month.

Mike Gray, Leatherhead, Surrey.

Making Music?

I am a musician interested in the musical possibilities of computers and I have been struggling with my 64 for sometime, so I was pleased to see the inclusion of a new series on music in the August issue.

However, I was disappointed after reading the article by Peter Gerrard. The article is supposed to be an introduction but I found it irritating that a couple of errors were made that would either confuse or baffle a newcomer.

Firstly terminology: the term waveform was confused with the term wavelength, waveform refers to the shape of the sound wave i.e. triangular, sawtooth, etc. Wavelength is the length of one complete cycle of the wave, i.e. from one peak of the wave to next. Physicists will know that wavelength is measured in metres like the dial on your radio and is inversely proportional to the frequency.

Finally the few lines of the program between the text which is supposed to make a sound will not work, because a value of zero is in the SID registers (54272 & 54273) that control the frequency. The first line of the program clears the SID chip by poking zeros into all the registers. A paragraph explaining the frequency control registers should have been included in this introductory article, after all if this was your first attempt at a sound program on the 64 you could have been put off for life.

For readers who are still in need of a little help I can recommend Ian Waugh's book *Music for Commodore 64* (Sunshine Press).

Despite the fact I am complaining, I think *Your Commodore* magazine is probably the best Commodore computing magazine around at the moment. There have been numerous useful utility programmes for the serious user so I am looking forward to more music articles in the future particularly interrupt driven music routines.

V.H. Berry, London.

We've had many letters praising Pete Gerrard's attempt at clarifying the quagmire of programming the Commodore sound chip.

Thanks, for pointing out the errors, anyway. Be assured that Pete has had his hands slapped.

As for interrupt music routines, these will be covered in a later part of Pete's series.

I wish to take this opportunity to congratulate you on your marvellous publication *Your Commodore*. I have purchased every edition and have found it extremely helpful. My previous computer was a 64 and I now own a 128. Therein lies the problem.

The really excellent utilities published, it seems to me, are for the most part aimed at 64 users. WIMP is an example of this. I hope that future issues will include 128 Utilities similar to WIMP.

Also your articles mention references to future articles, eg. single pixel hi-res smooth scrolling "à la Crowther". As I am obsessed with scrolling, I buy each issue in anticipation that this will be the one containing smooth scrolling, only to be disappointed. These future articles never seem to materialise. I hope some consideration might be given to continuity of a series.

Michael Vocale, Australia.

Many thanks for your kind comments about the magazine.

I'm sorry that you feel that most of our programmes are for the C64 and not the C128. Don't forget that all C64 programmes should work on the C128.

Obviously since most Commodore owners have a C64 the large majority of the submissions are for this machine. So come on you owners of other Commodore computers, send your programmes/articles in to us.

Sometimes authors of articles do promise us second, and even third parts, which unfortunately don't always materialise in our office; sometimes due to pressures of work. Even so, we do always try to bring you as many articles on programming as we can. Maybe this letter will provoke Mr Crowther into producing some new prose/programs for our readers to mull over.

By Gordon Davis

Warp Speed is the latest contender in the cartridge wars which have spawned the Expert and the Final Cartridge. It's not to be confused with the Warp 25 fast load system inside the Action Replay Mk IV cartridge from Datel which received the speed accolade in a recent comparative test by Commodore Disk User. I'd like to have put Warp Speed through an identical procedure, but I didn't have the precise test programs available.

I did however run some tests on a 47-block Basic program of my own. With no assistance from the cartridge, this program loaded on a 1541 drive in 35 seconds. The manual claims that Warp Speed can load such a file roughly 500 per cent faster. In 10.6 per cent faster. This can be improved on because the fast save on Warp Speed writes files to disk in 1571 format on a 1541 drive. Using the cartridge these can be reloaded, the manual says, up to 1000 per cent faster.

When tested, the fast save itself took just over seven seconds, while reloading took six seconds in this format. That's not 1000 per cent, more like 600, but to be fair, the claim is *up to* 1000 per cent faster. Frankly, this is rather sluggish. Warp Speed is doing the bare minimum of fast loading. Most rival cartridges use relatively sophisticated crunch/decrunch systems to reduce the number of bytes that they have to read and write. As a result, Action Replay's Warp 25 is able to do things at an incredible 35.6 bits per second. That's approximately 2000 per cent faster.

Warp Speed at its fastest is loading at about 10 bps (as against 1.8 bps for a naked system) which makes it comparable with the Freeze Machine in its slowest mode. Since this latter was the slowest loader during the cartridge speed trials, Warp Speed's performance is not good.

Clean cut

Perhaps Warp Speed has other good points? Well if you're on the lookout for a cartridge that does naughty things don't look at this one. You can't grab anything, freeze it or twiddle with it in any way.

Touchline:

Supplier: Financial Systems Software Ltd, 18 High Street, Pershore, Worcs WR10 1BG. **Tel:** (0386) 553153. **Machine:** C64/128. **Price:** £34.95.

Cinemaware have kept this little box squeaky clean, so unlike other companies they won't be getting slapped wrists from the software houses.

All this makes Warp Speed a little worthy-but-dull. Nonetheless it does have useful features. Disk or file copy and multi-scratch commands are included, plus a very respectable sector editor and an extensive range of utility commands.

There's also a built-in machine code monitor. Cinemaware says 'one of the most advanced monitors ever produced for the Commodore 64 and 128.' Could've fooled me! I must be missing some little thing or other, because to me it looks just like a monitor, neither better nor worse than a host of other monitors. Worse,

the manual describes it as a monitor/assembler. An incredible achievement

because what we have here is an assembler with one command! In fact what it does is to take a mnemonic and operand in immediate mode and convert them to machine code, that's all. Useless for entering more than about 8 bytes of code, and not even that if you need to branch. Hype, do they mean us?

All things considered, the most useful thing about Warp Speed is that it has a little switch which enables it to work in either C128 or C64 mode. Apart from that it's a rather dull, pedestrian product far surpassed by other cartridges on the market.

Commodore disk drives are classed as 'intelligent' drives because they contain their own disk operating system (DOS) which maximises the amount of free space for programming within the computer's memory. All of the operations are translated and executed by the 6502 based circuitry inside the drive making it effectively a dedicated computer in itself. Contained on the board is a 16K ROM operating system and 2K of RAM for temporary storage of information for transmission to the computer (buffers) and for variables generated by the 6502.

Information is stored on disk in short bursts of data (sectors) which are arranged around the disk in concentric rings known as tracks. There are 35 tracks across the disk surface but the number of sectors varies with the circumferential length of the track. Obviously the track around the centre of the disk is shorter than the first track around its rim. On most other disk

systems the number of sectors is the same on each track but the concept of the Commodore system is one of effective use of storage space. Where other systems leave large tracts of wasted space on the outer tracks, the 1541 system packs in extra sectors and increases the disk capacity.

TRACK NUMBERS	SECTORS	TOTAL
1-17	21	357
18	19	19
	(directory)	
19-24	19	114
25-30	18	108
31-35	17	85

Total number of sectors = 683
Number of usable sectors = 664

Most people know that each sector stores around 256 bytes of information but the data is not stored in the usual binary or hexadecimal format. A system known as Group Coded Recording (GCR) is used which displays certain features that enable the storage system to be even more compact than would be possible otherwise. GCR is an unambiguous system which reduces the number of extra data bytes required by most other storage systems.

GCR is based on binary bits in groups of five (extended nybbles) arranged in such a way that no consecutive bytes will result in a series of eight ones or eight zeros. The reason for this will soon become clear but first the GCR system must be explained.

To convert from eight binary to five bit GCR, the binary byte is split

into two four bit nybbles. For example the number 158 is represented in binary by 1001 1110. Taking each nybble in turn, Table 2 shows that these convert to 11001 and 11110. Information is still stored on the disk in eight bit bytes so the GCR value becomes a full byte of 1100111 and the top three bits of the next byte is formed by 110 and the first five bytes of the next GCR converted nybble.

A sector consists of an eight part header section, a fixed length gap, a seven part data section followed by another gap which leads to the next sector as shown in Table 2.

The first section of the sector consists of a synchronisation mark consisting of five bytes of value 255 which is immediately followed by a byte of value 8. The second section of the sector starts with an identical sync mark but this is followed by a value of seven. This means that when the head detects a 255 byte the operating system is alerted to the fact that some important information will follow. The next byte, the designation byte, indicates whether it is a data (7) or a header block (8).

On a header block the designation byte is followed by the two ID bytes specified in the formatting formula NO:DISKNAME,ID. This is why it is important to vary the ID from one disk to another.

The next two values pinpoint the actual track and sector values and finally a checksum byte is included as

LEAD IN TO NEXT TRACK SECTOR	
PAD 2	
CHECKSUM	
END OF FILE DATA	
FILE DATA	
NEXT SECTOR	
NEXT TRACK	
DATA TOKEN	
SYNC PULSE 2	
GAP 1	
PAD 1	
CHECKSUM	
SECTOR	
TRACK	
102	
101	
HEADER TOKEN	
SYNC PULSE 1	

an error check. The checksum is derived by applying the EOR command to the track, sector and two ID values in turn.

When converted to GCR the block count does not equal a whole number so a pad of two converted bytes (20 bits GCR) is used to give a total header block of 15 full GCR bytes which converts to exactly 12 decimal bytes.

To allow time for the calculation and evaluation of the checksum, there is a short padding gap of eight bytes (10 bytes GCR).

After this gap comes the data header sync signal followed by the data designation byte (7) indicating the start of the data block. The following 320 GCR bytes convert to what we know as the 256 normal binary bytes which form the data store, the first two bytes of which are a pointer to the next track and sector of program information.

The next byte is a checksum for the data block and is followed by a block equalising padding sector of 20 GCR bits. The intersector gap follows but its length depends on which track the sector is found and the speed of the drive.

The sector is 355 bytes long but when converted to true decimal this becomes 284 bytes. Of this only 254 bytes are of relevance to the computer so you can see that a sector is much more complicated than you may at first think. The complexity results in a very accurate and reliable basis for the operating system to latch onto.

As you can see the five bit GCR numbers are stored in the normal eight bit format so that the sequence 144, 0, 255, 7 would convert directly from GCR to decimal as 202, 148, 170, 165, 87, five bytes instead of four.

Why is such a complicated system necessary? The disk drive can cope with conversions very easily and the avoidance of bytes of 11111111 or 00000000 means that these can be used for special purposes. To examine this in depth means a study of the format of a single sector.

Disk Organisation

As you've seen, the disk has a rigid structure of tracks and sectors which must be organised by the DOS. To do this the system claims a full track for its own exclusive use - track 18. This is not counted when the 'blocks free' value is calculated so an empty,

Table 2 - Standard Systems to GCR Conversion

DEC	HEX	BIN	GCR	DEC	HEX	BIN	GCR
0	\$01	%0000	01010	8	\$08	%1000	01001
1	\$01	%0001	01011	9	\$09	%1001	11001
2	\$02	%0010	10010	10	\$0A	%1010	11010
3	\$03	%0011	10011	11	\$0B	%1011	11011
4	\$04	%0100	01110	12	\$0C	%1100	01101
5	\$05	%0101	01111	13	\$0D	%1101	11101
6	\$06	%0110	10110	14	\$0E	%1110	11110
7	\$07	%0111	10111	15	\$0F	%1111	10101

To make this clearer we'll consider how the following four decimal bytes would be stored:

Table 3 - Decimal to Eight bit GCR Conversion

DECIMAL	BINARY nybbles	GCR EXTENDED nybbles	EIGHT BIT GCR
144	1001 0000	11001 01010	11001010/10
0	0000 0000	01010 01010	010100/1010
255	1111 1111	10101 10101	1010/110101
7	0000 0111	01010 10111	01/01010111

Table 4 - Header format

Track 18 Sector 0

BYTE	CONTENTS	DEFINITION
0	Next track	Normally value 18
1	Next sector	Normally value 4
2	Format ident	For 1541 value is 65
3	Unused	Value zero
4-143	Block allocation map	See Table 5 for details
144-161	Start of disk name	Padded with 160 values if less than 16 bytes
162-163	Disk ID	Two byte ID also uses byte
164	Shifted space	Value 160
165-166	DOS version and format type	50 and 65 for 1541
167-168	Shifted spaces	Value 160
169-179	Not used	Value zero
180-191	Message	BLOCKS FREE characters on some versions, otherwise value zero
192-255	Not used	Value zero

Table 5 - Block Allocation Map (BAM)

Track 18, Sector 0: Bytes 4-143

BYTE	CONTENTS	DEFINITION
4	Number of free blocks	Blocks free on track 1
5	Bit map of sectors 0-7	
6	Bit map of sectors 8-15	
7	Bit map of sectors 16-23	
8-143	As for 4-7	Each track in turn in groups of four

e.g. BYTE	4	5	6	7
VALUE	OF	F8	E3	FF
BIT	15 blocks free	11111000	11100011	11111111
SECTOR		7-0	15-8	23-16

1 = block free 0 = block used

Table 6 - Directory Format

BYTE	CONTENTS	DEFINITION
0	Next directory block track	Always value 18
1	Next directory block sector	Value between 2 and 18
2	File type	128 = DEL 129 = SEQ 130 = PRG 131 = USR 132 = REL
3-4	Start track and sector	First file block pointer
7-20	First filename	Padded with value 160 if less than 16 characters
21-22	Side sector track	REL files only otherwise zero
24-27	Not used	Value zero
28-29	Track and sector of	Only used when 0: save is in use replacement file
30-31	Number of file blocks	Length of file in lo-hi format
32-33	Not used	Value zero
34-63	Second file	Similar to bytes 2-31
62-95	Third file	Similar to bytes 32-63
96-127	Fourth file	Similar to bytes 32-63
128-159	Fifth file	Similar to bytes 32-63
160-191	Sixth file	Similar to bytes 32-63
192-223	Seventh file	Similar to bytes 32-63
224-255	Eight file	Similar to bytes 32-63

Table 7 - Sequential files

BYTE	CONTENTS	DEFINITION
0-1	Next track and sector	Pointer to next SEQ block
2-255	Data bytes	254 file bytes

Table 8 - Program files

BYTE	CONTENTS	DEFINITION
0-1	Next track and sector	Pointer to next PRG block
2-3	Computer load location	Only on first block otherwise data
4-255	Program data	252 bytes

Table 9 - Relative Files

Record block

BYTE	CONTENTS	DEFINITION
0-1	Next track and sector	Pointer to next record block
2-255	254 bytes of data	Empty records contain 255 in the first byte followed by zeros. Partially filled records are padded with zeros

Side sector block

BYTE	CONTENTS	DEFINITION
0-1	New track and sector	Next side sector
2	Side sector number	Value 0 to 5
3	Record length	Maximum 255
4-5	Track and sector (0)	First side sector pointer
6-7	Track and sector (1)	Second side sector pointer
8-9	Track and sector (2)	Third side sector pointer
10-11	Track and sector (3)	Fourth side sector pointer
12-13	Track and sector (4)	Fifth side sector pointer
14-15	Track and sector (5)	Six side sector pointer
16-255	Track and sector pointers	Pointers to record blocks

formatted disk only has 664 blocks free and not 683 as you might expect.

The DOS uses sector 0 as a space to store the disk header name and ID and an area to map out which sectors have been used and which are still available. In common with every other used block on the disk, the first two bytes indicate the location of the next block in track and sector order. On the header block this is always \$12 and \$01 or track 18, sector 1 in decimal terms.

Track 18,1 is the first block of the directory index and each entry occupies 32 bytes. On the first file entry in a block the first two bytes (0 and 1) point to the next track and sector in the chain (usually 18,4). On all other entries the first two bytes are both zeros.

The third byte is where the directory really starts with a byte which denotes the type of file - PRG (program), SEQ (sequential), REL (relative), USR (user) or DEL (deleted).

The next two bytes are pointers to the first track and sector of the file proper, then sixteen bytes are reserved for a name and bytes 30 and 31 contain the number of blocks in the file in hexadecimal low byte, high byte order.

Relative files need a special sector or series of sectors (called side sectors) and their location is stored in bytes 21 and 22 (track and sector) and byte 23 stores the fixed record length.

The file blocks start with the usual track and sector pointer followed by data in SEQ and REL files but the PRG files reserve two bytes in the first sector for the load location in the computer's memory in hi-lo byte hex format. All the following PRG sectors resemble SEQ and REL file formats with the two pointers being followed by 254 bytes of solid program data.

This continues through the chain of blocks until the last sector in the file is reached. Here the first byte is always zero and the next byte indicates where the byte after the last byte of the file can be found so that DOS knows when to hand control back to the computer.

Going back to the side sector, this is principally a list of where each record of the file is located in track, sector format. The first two bytes will form the link to the next side sector but the record length is also included so that the DOS can calculate which sector on which track and on which byte of that sector a particular record starts.

Listings

*Get it right first time with our deluxe program system
for the C64.*

You may have noticed that our listings are free of those horrible little black blobs which send you searching around the keyboard for a suitable graphic symbol. You may also have noticed the funny numbers by the side of each line of the listing. Fret no more, it's all part of our easy entry aid.

Instead of those nasty graphics and rows of countless spaces in PRINT statements and strings we use a special coding system. The code, or mnemonic, is always contained in square brackets and you'll soon learn to decipher their meanings.

For example, [SA] would mean type in a Shifted A, or an ace of spades in layman's terms, and [SA10] would mean a row of ten of these symbols.

[S+2] means hold down the shift key and press the plus key twice. It doesn't take a great leap of logic to realise that [C+2] means exactly the same thing except that the Commodore key (bottom left of the keyboard) is held down instead of the shift key.

If more than two spaces appear in a statement then this will be printed as [SPC4] or, exceptionally, [SSPC4]. Translated into English this means press the spacebar four times or in the latter case hold the shift key down while you do it.

A string of special characters could appear as:

[CTRL N, DOWN2, LEFT5, BLUE, F3, C3]

This would be achieved by holding

down the CTRL key as you press N, press the cursor key down twice, the cursor left key five times, press the key marked BLUE while holding down the CTRL key, press the F3 key and, finally hold the Commodore key down while pressing the number two key (C2 would of course make the computer print in brown).

Always remember that you should only have a row of graphics characters on your screen with no square brackets and no commas, unless something like this appears:

[SS],[C*]

In this case the two characters should have a comma between them.

On rare occasions [REV T] will appear in a listing. This is a delete symbol and is created by entering the line up to this mnemonic. Then type a closing quotation mark (SHIFT & 2) and delete it. This gets the computer out of quotes mode. Hold down CTRL and press the number nine key (RVSON), type the relevant number of reversed T's and then hold down CTRL and press zero (RVSOFF). Next type another quotation mark and delete it again. Now finish the line and press RETURN.

A list of these special cases is given in the table but remember that only one of these mnemonics will appear outside of a PRINT string: the symbol for pi. This may appear when its value is needed in a calculation so this may look something like:

:CC=2*[PI]*R:

Ignore the square brackets and just type in a shifted upward pointing arrow (ie. the pi symbol).

Checksum Program

The hexadecimal numbers appearing in a column to the left of the listing should not be typed in with the program. These are merely checksum values and are there to help you get each line right. Don't worry if you don't understand the hexadecimal system, as long as you can compare two characters on the screen with the corresponding two characters in the magazine you can use our line checking program.

Type in the Checksum Program, make sure that you've not made any mistakes and save it to tape or disk

immediately because it will be used with most of the present and future listings appearing in Your Commodore.

At the start of each programming session, load Checksum and run it. The screen will turn brown with yellow characters and each time you type in a line and press the RETURN key a number will appear on the screen in white. This should be the same as the corresponding value in the magazine.

If the two values don't relate to one another, you have not copied the line exactly as printed so go back and check each character carefully. When you find the error simply correct it and

press RETURN again.

If you want to turn off the checker simply type SYS49152 and the screen will return to the familiar blue colours. You can then do whatever it was you wanted to do and if this doesn't use the area where Checksum lies you can go back to it with the same SYS command.

No system is foolproof but the chances of two errors cancelling one Many of the listings are presented in lower case. To turn your computer to lower case mode press the Commodore key and the SHIFT key at the same time.

WILLIAM TELL

Here are the first two parts of William Tell which will build up over the next few months into the full program. These parts will not run individually so, after you type them in, save them onto a tape or disk and keep it safe. The final installment will contain full instructions on what to do to bring all of the parts together.

PROGRAM: WT1.BAS

LIFESAVERS 12	C64	DATA ERRORS	1/2
---------------	-----	-------------	-----

When typing in a large amount of data, such as most *Your Commodore* listings, it is quite likely that you will make at least one typing mistake.

When you eventually RUN the program it can be especially annoying to be presented with an ILLEGAL QUANTITY ERROR IN LINE message. Even more annoying is the fact that upon checking the line in the error message you can't see anything wrong with it.

Imagine the following situation:

You have typed in the listing below, enter it now if you like:

```
10 A=A+1 : READ X : IF X = -1
THEN SYS 49152
20 POKE 49152+A,X : GOTO 10
30 DATA 169,0,132,16,5
```

```
40 DATA 255,255,255,257,255
50 DATA 169,0,132,16,5
60 DATA -1
```

Line 10 READs the numbers from the DATA statements. Line 20 POKEs the numbers that you have read into memory.

When you RUN the above program all will be well until the program reaches the 257 in line 40. Line 10 READs this number without any problems. However, as soon as line 20 attempts to POKE it into memory you will get the dreaded ILLEGAL QUANTITY ERROR IN LINE 20 message. Nothing is wrong with line 20, it's the DATA that is at fault since you can only POKE numbers up to 255 into a memory location. The number that was being POKEd in the above example was 257, hence the error.

COMMODORE REPAIRS

We specialise in repairs of Commodore Computers and Peripherals and many others.

Bug Finder

We'd like to remind our readers that we run a Bug Finder service.

If you have typed in one of our programs and despite much checking, you still can't get it to run, then send us the following:

Two copies of your program on tape or disk.

A description of your problem.

If possible a listing of your work (you may omit this).

A stamped, self-addressed envelope for return of the program to you.

Should any of the above be missing then we will not be able to deal with your query.

We will try to point out where you have made errors and place a corrected copy of the program back on to your tape or disk before we return it to you.

Do not send a program to us as soon as it stops working, please check it several times first.

We do get a large number of queries and so it may take a while for us to deal with yours personally.

Note: we can only deal with problems relating to programs published in *Your Commodore*.

At the *Your Commodore* office we receive hundreds of letters from readers every month. We do try and answer each individually but sometimes this is impossible due to pressure of work. If you have written to us and not received a personal reply, we apologise for this but we cannot promise to reply to every item of mail we receive. If you feel that your question or letter really needs an answer, then inclusion of an s.a.e. will guarantee a reply, although this may still take time to arrive.

Oops!

Unfortunately the gremlins found their way into the SIMPLE program that we published in the August 1988 issue of the magazine. You will find the corrections below together with more detailed instructions on how to enter the program.

These are the only corrections that the program requires, if you still have problems we suggest that your typing very carefully.

Entry Instructions

1) Type in and save the program.

2) Enter the following:

POKE 10240,0: POKE 44,40 NEW

3) Load the SIMPLE basic loader.

4) Type: RUN

5) When finished type: NEW

6) Enter the listing presented here.

PROGRAM: SIMPLE CORRECTION

Software Submissions.

Readers who have sent, or who are thinking of sending, programs for possible publication will be pleased to know that we are now up to date with all such items.

We would like to thank all contributors for their patience in waiting for a reply from us.

A new computerised system has

been set up to deal with readers submissions which should enable us to deal with them much quicker.

Should you have any queries about submissions please write to:

Program Submissions Query

Your Commodore
1 Golden Square
London W1R 3AB.

7) Type: RUN

8) Type: MONITOR

9) Enter the following to save the program:

S "SIMPLE",8,1000,2801 for disk or:
S "SIMPLE",8,1000,2801 for tape.

Puzzle Corner

Puzzle A

Consider the word *ABCESS*. You will see that it contains three consecutive letters viz *ABC*.

There are 26 such triplets. Obviously many of them do not appear in any recognisable English word. How many words can you find that have three consecutive letters? Remember, they don't have to be at the start of the word.

Puzzle B

As a change from triangles, how many rectangles are there in **Diagram A**.

Send your entries to, November Puzzle Corner, *Your Commodore* 1 Golden Square, London W1R 3AB

The first two correct answers pulled out of the hat on the closing date of November 30th will receive a free *Your Commodore* binder.

Diagram A

THE
SLIMLINE

'64

Only
£19.95

Your '64 could look like this! Why put up with an old fashioned looking computer? Fit this smart and modern looking new case to your '64 - it will look and feel like you are using a brand new computer. This high quality injection moulded case is simple to fit and gives a lower keyboard height. Reject the old image and order one now.

FREEZE MACHINE for speed, power and ease of use

- ☐ Unstoppable Freeze
- ☐ Fast save routines
- ☐ Ultra-efficient file compactor
- ☐ Lazer and Turbo fastloads
- ☐ Integral reset button
- ☐ Tape turbo facilities
- ☐ 12 second disk format
- ☐ Selective file copier
- ☐ Selectaloud
- ☐ many more useful features!

Only £28.95

For speed, power and ease of use it has to be Freeze Machine, probably the most effective backup cartridge on the market! Incorporating two types of fast load routines you can SAVE and reLOAD your favourite games in as little as 10 seconds and no more than 18. Numerous invaluable facilities available, including a built-in reset button. Utility Disc V3.0 also available to complement usage of the cartridge. It allows complete transfer to disk of many tape-based programs that load extra parts, eg. Gunship, Last Ninja, World Games, Supercycle. A very useful add-on. Utility disc only £7.95

Selected Products

LOAD IT!! The best thing to happen to a Commodore data recorder. Includes built-in azimuth adjustment knob and LED tape signal level meter £39.95

DOUBLER '64 Makes perfect tape backups every time. Consists of hardware and software. Requires access to two data recorders. Very easy to use, only £12.95

ICONTROLLER Natty little keyboard mounted cursor controller, ideal for icon-driven applications like GEOS £11.95

DOLPHIN DOS Parallel operating system for use with 64/128 and 1541 disk drive. Fantastic speed increase on LOAD and SAVE whilst maintaining CBM disk format. Many extra DOS & BASIC commands, includes built-in monitor and Centronics printer driver £69.95

DISC DISECTOR V5.0 Disk backup/utility package featuring wide range of powerful programs. Compatible with 64/128/128D and 1541/1570 disk drives £19.95

1541 PHYSICAL EXAM Consists of digital alignment disk and drive fault diagnosis software to check and correct 1541 head alignment. Includes quiet drive stops £39.95

1541 QUIET DRIVE STOPS Silences 'knocking' noise with 1541 drives (not suitable for 'turn lever' type drives) £4.95

DATA RECORDER CBM compatible, same as C2N/1531 but cheaper and includes pause control button £24.95

AZIMATE 3000 KIT Tape loading problems? Use this kit to check and adjust data recorder head alignment £6.95

You won't find these programs in the top ten!

These programs have sold thousands of copies, and yet you won't have seen them in the charts — why?

We produce programs that you can really get your teeth into. Programs like **BUSICALC** and **BUSICALC 3** which can be used at home or in the office to do all sorts of calculations, forecasts and budgets.

Programs like **MIKRO ASSEMBLER** and the **ZOOM** monitor which make it easy to write machine code programs. Programs like **MUSIC MASTER** which turn your computer into a musical instrument. And programs like the **BLITZ** compiler which makes ordinary BASIC programs run much, much faster.

We have been writing programs for Commodore computers since 1978 and now have hundreds of programs for the PET, VIC 20, CBM 64, CBM 128, even the C16 and Plus/4. So why aren't our programs in the charts?

Because our programs aren't one minute wonders, here today and gone tomorrow. Programs we released for the 64 in 1983 are still selling — and even more important, the people who bought them then are still using them.

Software should be an investment, not money down the drain. We believe that the more you put into a program, the more you should get out of it, and that's the way it works with software from **SUPERSOFT**.

The programs listed on the right represent a small selection from our range, but you can get a full list if you phone or write to the address below. We offer an excellent mail order service, and you can pay by cheque, Access, or Visa.
